Handbook of Climate Change Mitigation and Adaptation Maximilian Lackner, Baharak Sajjadi, Wei-Yin Chen, 2025-09-26

Now in its 4th extended edition this completely revised and significantly expanded handbook addresses important new research findings and the global need for action related to climate change in its two most relevant aspects mitigation and adaptation. There is a growing consensus that anthropogenic activities have been driving global climate change and the consequence will be catastrophic for civilization. Reducing the 37.1 billion metric tons of CO₂ produced annually 2017 global emissions along with other greenhouse gases particularly methane has become a leading grand challenge and the pursuit of sustainable energy environments and economies is a complex issue affecting the daily life of every citizen. In this 4th edition readers will find new chapters covering the causes and impacts of global warming, the climate change impacts on health, biodiversity and the economy and emerging technologies for climate change mitigation. Particular attention is given to topics such as wildfire threats, ocean acidification, coral bleaching, sea level rise and permafrost thaw. The latest research on sustainable aviation fuels, carbon mineralization and smart cities is also covered in this new edition as well as topics like sustainable building design, climate resistant building materials and sustainable agriculture. The Handbook of Climate Change Mitigation and Adaptation collates information in this multi-disciplinary area providing readers with a comprehensive overview of the scientific background and current and emerging technologies. Intended for an interdisciplinary global audience of researchers and decision makers at universities and in industry it covers climate change models, established mature and promising future technologies and ideas, the impact of climate change strategies for dealing with global warming, the related political frameworks and climate education.
