

had seeds that would only produce tall pea plants. These were called "pure tall" seeds.

Using this same method, Mendel grew plants that were pure for the trait of shortness. He called the "pure tall" and the "pure short" plants the ____ generation. ____ stands for parent generation.

Example of generation: your grandparents are the first generation, your parents are the second generation, and you are a part of the third generation.

Mendel wondered what type of offspring two different pure plants would produce. He used a method called ____-pollination to find out. He moved the pollen from pure tall pea plants to the female sex organs of pure short pea plants. He placed pollen from pure short plants on the female sex organs of pure tall plants. When they produced seeds, Mendel planted the seeds. He called these plants the ____ generation. The ____ stands for filial, which means son or daughter. The ____ stands for the first filial generation.

To his surprise, Mendel found that all the F₁ generation plants were tall. Mendel crossed hundreds of these pure short and pure tall plants. He observed that the offspring plants had similar results each time. All the offspring were tall - none were short.
