## CONTENTS

chapter 4 continued

**20. —continued—**

a. Write three products of 2 numbers

$$2 \times 100 \quad 2 \times 100 \quad 2 \times 10 \quad 2 \times 20$$
$$2 \times 10 \quad 2 \times 10$$

b. Write arrangements

4 rows of 10 photographs

10 rows of 4 photographs

Draw an array. 2 possible arrangements

**21. Name factors**

$$4 = 2^2 \qquad 36 = 6^2$$
$$6 = 2 \cdot 3 \qquad 36 = 3^2 \cdot 2^2$$
$$12 = 2^2 \cdot 3 \qquad 36 = 2^2 \cdot 3^2$$

**Conclusion:** The exponents in the prime factorization of a perfect square are even integers.

**22. The perfect squares between 20 and 100 are**

$$25 = 5 \cdot 5 \quad 36 = 6 \cdot 6 \quad 49 = 7 \cdot 7$$

**23. The factors of 18 are 1, 2, 3, 6, 9, and 18. So, if 18 is a factor of a number, then 1, 2, 3, 6, 9, and 18 must also be factors of that number.**

**Example:** 18 is a factor of 72, so 1, 2, 3, 6, 9, and 18 should also be factors of 72.

The factors of 72 are 1, 2, 3, 4, 6, 8, 9, 12, 18, 24, 36, and 72.

**Mathematical Tasks in Classrooms Around the World**, 2010-01-01 Mathematical tasks have long been recognized as crucial mediators between mathematical content and the mathematics learner For many people the mathematics classroom is defined by the type of tasks one finds there and this is appropriate Mathematical tasks are the embodiment of the curricular pretext that brings each particular set of individuals together in every mathematics classroom In other contexts individuals come together to engage in musical performances or dramatic performances The performances of the mathematics classroom are largely the performance of mathematical tasks and if we are to understand and facilitate the learning that is the purpose of such settings then we must understand the nature of the performances that we find there The classroom performance of a task is ultimately a unique synthesis of task teacher students and situation Of particular interest are differences in the function of mathematically similar tasks when employed by different teachers in different classrooms for different instructional purposes with different students By making comparison possible between the classroom use of mathematical tasks in different classrooms around the world the analyses reported in this book reveal the profound differences in how each teacher utilises mathematical tasks in partnership with their students to create a distinctive form of mathematical activity The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants The LPS research design documents sequences of at least

ten lessons using three video cameras supplemented by the reconstructive accounts of classroom participants obtained in post lesson video stimulated interviews and by test and questionnaire data and copies of student written material In each participating country data generation focuses on the classrooms of three teachers identified by the local mathematics education community as competent and situated in demographically different school communities within the one major city The large body of complex data supports both the characterisation of practice in the classrooms of competent teachers and the development of theory      **Algebra 1** Ron Larson, McDougal Littell, 2001
