New Perspectives on Industrial Policy for a Modern Britain David Bailey, Keith Cowling, Phil Tomlinson, 2015 In the aftermath of the global financial crisis of 2008 and the ensuing Great Recession of 2008 to 2013 the economic debate has begun to shift towards rebalancing the UK economy away from an over reliance upon consumerism and the financial sector to generate growth towards more sustainable productive activities The fallout from the financial crisis exposed the systemic failings of the dominant neo liberal model to deliver balanced growth and there is now increasing recognition this rebalancing might best be achieved through the state pursuing an active industrial policy Thus after a long hiatus industrial policy is back in vogue at regional national and EU levels driven by concerns over competitiveness globalisation de industrialisation unemployment and the comparatively slow growth of the British and EU economies especially in this post recession phase At the same time industrial policy has been seen as a catalyst for designing economic recovery strategies at regional national and EU levels as well as being a concerted strategy to develop new clean tech industries to tackle environmental challenges This book brings together leading European based experts each with a long standing interest in industrial policy The chapters offer a broad set of perspectives on the many facets of industrial policy including reflections upon past experiences of industrial policy from across the globe and critical analysis and advice upon contemporary UK industrial policy issues They aim to critically inform and challenge policy makers policy think tanks industrialists trade unions academics and other stakeholders in framing the future course for industrial policy in the UK and indeed more widely

How can mathematics education foster development of the skills required by innovative societies Mathematics education is heavily emphasized worldwide but it is still considered to be a stumbling block for many students While there is near consensus that mathematics problems appropriate for the twenty first century should be complex unfamiliar and nonroutine CUN most of the textbooks still include mainly routine problems based on the application of ready made algorithms The time has come to introduce innovative instructional methods to enhance mathematics education and students ability to solve CUN tasks Metacognitive pedagogies which explicitly train students to think about their thinking can play a key role These pedagogies can be used to improve not just academic achievement for example content knowledge and the ability to handle unfamiliar problems but also affective outcomes such as anxiety and motivation The strong relationship between metacognition and schooling outcomes has implications for both the education community and policymakers Is That a Fact? John Barron,2014-12-01 Get all the facts if you can handle the truth Does Australia take the highest number of refugees per capita in the world Are vegetarians slimmer than meat eaters Is Clive Palmer really a billionaire Every day the ABC Fact Check unit listens to scores of claims being made in the news and asks can that be true they check the facts talk to the experts and bring you the right answer In this compact new book the Fact Check team headed by ABC journalist and broadcaster John Barron pull together the facts on over one hundred burning questions Whether shark culls really work is Australia s debt out of control or whether any political party really has created a million new jobs They also tackle the fact check zombies the disproven claims which simply will not die and they target the public figures who play fast and loose with the truth Fun informative and most importantly trustworthy this is a book for everyone who s ever wondered if the facts are
