Constitutive Models for Rubber XI Bertrand Huneau, Jean-Benoît Le Cam, Yann Marco, Erwan Verron, 2019-06-07

Constitutive Models for Rubber XI is a comprehensive compilation of both the oral and poster contributions to the European Conference on Constitutive Models for Rubber. This 11th edition held in Nantes France 25-27th June 2019 is the occasion to celebrate the 20th anniversary of the ECCMR series. Around 100 contributions reflect the state of the art in the mechanics of elastomers. They cover the fields of Material testing, Constitutive modelling and finite element implementation.

Micromechanical aspects and Durability, failure, fatigue and ageing. *Constitutive Models for Rubber XI* is of interest for developers and researchers involved in the rubber processing and CAE software industries as well as for academics in nearly all disciplines of elastomer mechanics and technology.

Supply Chain Management and Corporate Governance Catherine Xiaocui Lou, Sardar M. N. Islam, Nicholas Billington, 2022-07-29

Supply Chain Management and Corporate Governance Artificial Intelligence Game Theory and Robust Optimisation is the first innovative comprehensive analysis and analytical robust optimisation modelling of the relationships between corporate governance principles and supply chain management for risk management and decision making under uncertainty in supply chain operations. To avoid corporate failures and crises caused by agency problems and other external factors, effective corporate governance mechanisms are essential for efficient supply chain management. This book develops a new collaborative robust supply chain management and corporate governance RSCMCG model and framework that combines good corporate governance practices for risk management strategies and decision making under uncertainty. This model is developed as a principal agent game theory model and it is digitalised and computed by Excel algorithms and spreadsheets as an artificial intelligence and machine learning algorithm. The implementation of the RSCMCG model provides optimal supply chain solutions, corporate governance principles and risk management strategies for supporting the company to achieve long term benefits in firm value and maximising shareholders interests and corporate performance while maintaining robustness in an uncertain environment. This book shows the latest state of knowledge on the topic and will be of interest to researchers, academics, practitioners, policymakers and advanced students in the areas of corporate governance, supply chain management, finance, strategy and risk management.

Integrated Imaging of the Earth Max Moorkamp, Peter G. Lelièvre, Niklas Linde, Amir Khan, 2016-05-02 Reliable and detailed information about the Earth's subsurface is of crucial importance throughout the geosciences. Quantitative integration of all available geophysical and geological data helps to make Earth models more robust and reliable. The aim of this book is to summarize and synthesize the growing literature on combining various types of geophysical and other geoscientific data. The approaches that have been developed to date encompass joint inversion, cooperative inversion and statistical post inversion analysis methods, each with different benefits and assumptions. Starting with the foundations of

inverse theory this book systematically describes the mathematical and theoretical aspects of how to best integrate different geophysical datasets with geological prior understanding and other complimentary data This foundational basis is followed by chapters that demonstrate the diverse range of applications for which integrated methods have been used to date These range from imaging the hydrogeological properties of the near surface to natural resource exploration and probing the composition of the lithosphere and the deep Earth Each chapter is written by leading experts in the field which makes this book the definitive reference on integrated imaging of the Earth Highlights of this volume include Complete coverage of the theoretical foundations of integrated imaging approaches from inverse theory to different coupling methods and quantitative evaluation of the resulting models Comprehensive overview of current applications of integrated imaging including hydrological investigations natural resource exploration and imaging the deep Earth Detailed case studies of integrated approaches providing valuable guidance for both experienced users and researchers new to joint inversion This volume will be a valuable resource for graduate students academics industry practitioners and researchers who are interested in using or developing integrated imaging approaches

Optimal Trajectory Planning and Train Scheduling for Urban Rail Transit Systems Yihui Wang,Bin Ning,Ton van den Boom,Bart De Schutter,2016-04-21 This book contributes to making urban rail transport fast punctual and energy efficient significant factors in the importance of public transportation systems to economic environmental and social requirements at both municipal and national levels It proposes new methods for shortening passenger travel times and for reducing energy consumption addressing two major topics 1 train trajectory planning the authors derive a nonlinear model for the operation of trains and present several approaches for calculating optimal and energy efficient trajectories within a given schedule and 2 train scheduling the authors develop a train scheduling model for urban rail systems and optimization approaches with which to balance total passenger travel time with energy efficiency and other costs to the operator Mixed integer linear programming and pseudospectral methods are among the new methods proposed for single and multi train systems for the solution of the nonlinear trajectory planning problem which involves constraints such as varying speed restrictions and maximum traction braking force Signaling systems and their effects are also accounted for in the trajectory planning model Origin destination passenger demand is included in the model formulation for train scheduling Iterative convex programming and efficient bi level approaches are utilized in the solution of the train scheduling problem In addition the splitting rates and route choices of passengers are also optimized from the system point of view The problems and solutions described in *Optimal Trajectory Planning and Train Scheduling for Urban Rail Transit Systems* will interest researchers studying public transport systems and logistics whether from an academic or practitioner background as well as providing a real application for anybody studying optimization theory and predictive control
