About Virtual Tunnel Interfaces

The most significant logical interface called Virtual Tunnel Interface (VTI). Across platforms or platform-based IOS-XE, a VTI is implemented for unicast, multicast, and tunnel-based interfaces. This supports cross-platform VTI with different profiles attached to the end of each tunnel. This allows dynamic or static routes to be sent. Depending on the type of VTI, the network can be sent to the peer and the network can be changed to the network within the VTI.

Using VTI along with the implementation of configuring static routes, static routes can be sent and changing static routes. The static routes can be sent off network interface and include them in the static routes. This allows dynamic routes to be sent. Depending on the type of VTI, the network can be sent to the peer and the network can be changed to the network within the VTI.

Guidelines for Virtual Tunnel Interfaces

General Configuration Guidelines

- VTI is only configured for IPv4 routes. The interface VTI is only for IPv4 is recommended.
- The static routes are sent to the peer across the VTI using the static routes.
- The VTI is only configured for IPv4 routes, depending on the underlying physical interface. However, it can change the physical interface VTI when the VTI is configured. The static routes are sent to the peer and the network can be changed to the network within the VTI.
- VTI supports IPv4 and IPv6. The static routes are sent to the peer and the network can be changed to the network within the VTI.
- All statically configured routes are sent to the peer. The VTI and VTI are only for IPv4 is recommended.

A Virtual Reality Interface Design (VRID) Model and Methodology Tanriverdi. Vildan, 2001 Virtual reality VR interfaces need to support a richer variety and more complex types of human computer interactions objects behaviors and communications than those observed in conventional interfaces Therefore design and development of VR interfaces is a challenging process that is currently more of an art than a science There is need for design models and methodologies that can guide designers in a thinking comprehensively about the overall design of the VR interface b decomposing the design task into smaller conceptually distinct and easier tasks and c communicating the structure of the design to software developers In this dissertation we introduce a virtual reality interface design VRID model and an associated VRID methodology to guide design of virtual reality interfaces The VRID model aims to provide guidance to designers as to what they should be doing in the design and why while the VRID methodology provides procedural steps and guidelines as to how the design model can be applied methodically The model uses a multi component object architecture to help designers specify graphical features behaviors interactions and communication mechanisms of interface objects The methodology guides designers in generating design specifications at high and low levels of abstraction and facilitates iterations and refinements between the two levels until a conceptually sound and practically implementable
