Bunker Ship Operations Ahmed Mahmoud Abd El Wahab, 2022-09-02 Merchant shipping remains the largest carrier of freight throughout recorded history due to the economic advantages involved. Optimum management of the global propulsion power may result in large cut down of marine fuel grades which will in turn benefit environment and the economics of the shipping community. Although water transport is still the most efficient mode, small ratio of CO₂ per cargo ton per mile the aim is for vessel's further energy efficiency optimization, bunker minimization and in turn reduction of CO₂, NO_x, SO_x. An energy efficiency management scheme cannot be sustained unless a meaningful and practical mode of monitoring is applied.
