Advanced Neuroimaging Methods for Studying Autism Disorder Alessandro Grecucci, Roma Siugzdaite, Remo Job, 2017-11-16 In the last twenty years many attempts have been made to provide neurobiological models of autism Functional structural and connectivity analyses have highlighted reduced responses in key social areas such as amygdala medial prefrontal cortex cingulate cortex and superior temporal sulcus However these studies present discrepant results and some of them have been questioned for methodological limitations The aim of this research topic is to present advanced neuroimaging methods able to capture the complexity of the neural deficits displayed

in autism This special issue presents new studies using structural and functional MRI as well as magnetoencephalography and novel protocols to analyze data Analysis of Cluster Variability Noise Reduction Strategies Source based Morphometry Functional Connectivity Density Restriction Spectrum Imaging and the others We believe it is time to integrate data provided by different techniques and methodologies in order to have a better understanding of autism *Human and Animal Models for Translational Research on Neurodegeneration: Challenges and Opportunities From South America* Agustín Ibáñez, Lucas Sedeño, Adolfo M. García, Robert M.J. Deacon, Patricia Cogram, 2018-06-21 Neurodegenerative diseases are the most frequent cause of dementia representing a burden for public health systems especially in middle and middle high income countries Although most research on this issue is concentrated in first world centers growing efforts in South America are affording important breakthroughs This emerging agenda poses new challenges for the region but also new opportunities for the field This book aims to integrate the community of experts across the globe and the region and to establish new challenges and developments for future investigation We present research focused on neurodegenerative research in South America We introduce studies assessing the interplay among genetic neural and behavioral dimensions of these diseases as well as articles on vulnerability factors comparisons of findings from various countries and works promoting multicenter and collaborative networking More generally our book covers a broad scope of human research approaches behavioral assessment neuroimaging electromagnetic techniques brain connectivity peripheral measures animal methodologies genetics epigenetics proteomics metabolomics other molecular biology tools species all human and non human animals sporadic and genetic versions and article types original research review and opinion papers Through this wide ranging proposal we hope to introduce a fresh approach to the challenges and opportunities of research on neurodegeneration in South America

The Matlab® 5 Handbook Darren Redfern,Colin Campbell,2012-12-06 How to Use This Handbook The MATLAB Handbook is a complete reference tool for the MATLAB computation language and is written for all MATLAB users regardless of their discipline or field s of interest All the built in mathematical graphic and system based commands avail able in MATLAB 51

are detailed herein Overall Organization One of the main premises of The MATLAB Handbook is that most MATLAB users approach the system to solve a particular problem or set of problems in a specific subject area Therefore all commands are organized in logical subsets that reflect these different categories e g linear equations ordinary differential equations surface and volume graphics etc and the commands within a subset are explained in a similar language creating a tool that allows you quick and confident access to the information necessary to complete the problem you have brought to the system In addition because there is much information about MATLAB that is very difficult to express on a purely command by command basis each subject is prefaced with an introductory section Here detailed examples are given profiling some of the most common applications of the commands in that particular section There is also an introductory session titled MATLAB Quick Start which is intended to get those readers not already familiar with MATLAB off to a flying start
