Processing Ed. F. Deprettere, 1988 Compiled in this book is a selection of articles written by internationally recognized experts in the fields of matrix computation and signal processing In almost all digital signal processing DSR problems the available data is corrupted by measurement noise or is incomplete Classical techniques are unable to separate signal spaces and noise spaces However the information hidden in the data can be made explicit through singular value decomposition SVD SVD based signal processing is making headway and will become feasible soon thanks to the progress in parallel computations and VLSI implementation The book is divided into six parts Part one is a tutorial beginning with an introduction including VLSI parallel algorithms and some intriguing problems It describes several applications of SVD in system identification and signal detection It also deals with the fundamental harmonic retrieval problem and principal component analysis Part two discusses details of model reduction system identification and detection of multiple sinusoids in white noise while part three is devoted to the total least squares and generalized singular value decomposition problems The fourth section deals with real time and adaptive algorithms the fifth examines fast algorithms and architectures such as block algorithms computational arrays systolic arrays hypercubes and connection machines and the final part addresses some open problems Proceedings of the IEEE Signal Processing Workshop on Higher-Order Statistics, July 21-23, 1997, Banff, Alberta, Canada, 1997 This text covering the 1997 IEEE Signal Processing Workshop on High Order Statistics is designed for researchers professors practitioners students and other computing professionals **Laser Physics**, 2004 **Numerical Simulation of Blood Flow in Arteries** Thomas Fundi Rutaganira, 1997 On the Complexity of Path-following Newton Algorithm for Solving Systems of Polynomial Equations with Integer Coefficients Gregorio Malajovich-Muñoz, 1994
