

6. Use loops to create a 4×6 matrix in which the value of each element is two times its row number minus three times its column number. For example, the value of element (2,5) is $2 \times 2 - 3 \times 5 = -11$.

Solution**Script File**

```
for i=1:4
    for j=1:6
        A(i,j)=2*i-3*j;
    end
end
A
```

Command Window:

```
A =
    -1     -4     -7    -10    -13    -16
     1     -2     -5     -8    -11    -14
     3      0     -3     -6     -9    -12
     5      2     -1     -4     -7    -10
```

7. Write a program that generates a vector with 30 random integers between -20 and 20 and then finds the sum of the all the elements that are divisible by 3.

Solution**Script File:**

```
v=randi([-20 20],1,30)
n=length(v);
S=0;
for i=1:n
    if rem(v(i),3)==0
        S=S+v(i);
    end
end
S

Topping, Michael Bane, 2022-08-15

INTRODUCTION TO AEROSOL MODELLING Introduction to Aerosol Modelling From Theory to Code An aerosol particle is defined as a solid or liquid particle suspended in a carrier gas Whilst we often treat scientific challenges in a siloed way aerosol particles are of interest across many disciplines For example atmospheric aerosol particles are key determinants of air quality and climate change Knowledge of aerosol physics and generation mechanisms is key to efficient fuel delivery and drug delivery to the lungs Likewise various manufacturing processes require optimal generation delivery and removal of aerosol particles in a range of conditions There is a natural tendency for the aerosol scientist to therefore work at the interface of the traditional academic subjects of physics chemistry biology mathematics and computing The impacts that aerosol particles have are linked to their evolving chemical and physical characteristics Likewise the chemical and physical characteristic of aerosol particles reflect their sources and subsequent processes they have been subject to Computational models are not only essential for constructing evidence based understanding of important aerosol processes but also to predict change and impact Whilst existing textbooks provide an overview of theoretical frameworks on which aerosol models are based there is a significant gap in reference material that provide training in translating theory into code The purpose of this book is to provide readers with exactly that In following the content provided in this book you will be able to reproduce models of key processes that can either be used in isolation or brought together to construct a demonstrator 0D box model of a coupled gaseous particulate system You may be reading this book as an undergraduate postgraduate seasoned researcher

in the private public sector or as someone who wishes to better understand the pathways to aerosol model development
 Wherever you position yourself it is hoped that the tools you will learn through this book will provide you with the basis to
 develop your own platforms and to ensure the next generation of aerosol modellers are equipped with foundational skills to
 address future challenges in aerosol science *Basic Engineering Circuit Analysis* J. David Irwin,R. Mark Nelms,2008-01-02
 This reader friendly book has been completely revised to ensure that the learning experience is enhanced It is built on the
 strength of Irwin s problem solving methodology providing readers with a strong foundation as they advance in the field

 topical coverage for process control courses in the chemical engineering curriculum emphasizing how process control and its
 related fields of process modeling and optimization are essential to the development of high value products A principal
 objective of this new edition is to describe modern techniques for control processes with an emphasis on complex systems
 necessary to the development design and operation of modern processing plants Control process instructors can cover the
