glycosylated protein that was first identified on the cell surface of murine thymocytes Today it is known to be expressed in  
several other cell types including human fetal thymocytes hematopoietic stem cells some subsets of fibroblasts liver stem  
progenitor neurons glioblastoma mesothelium precursors and mesothelioma cells In some tissues Thy 1 CD90 plays a role in  
different processes such as cell adhesion interaction with extracellular matrix migration However despite the available  
insights to the function of the molecule we still require a better understanding of the processes that drive Thy1 CD90  
expression and the consequences of its presence in cells as well as to what extent these functions are conserved between  
species The latter is especially relevant when thinking about possible translational studies In this Research Topic various  
aspects covering available and missing knowledge related to the molecular mechanisms controlling Thy1 CD90 expression  
and its role in physiological and pathological conditions are discussed      *Host Bibliographic Record for Boundwith Item
