

STEP 2 Set up the predators. There is variation in predatory feeding apparatuses in this population. Each group member will choose one of the available predator feeding apparatuses: fork, spoon, knife, or four fingers (with your thumb taped to your hand so that you cannot use it). Each group member will also take a cup, which will represent the predator's mouth. Your goal will be to use your feeding apparatus to collect food and put it in your mouth.

STEP 3 Set up the prey in the environment. Your instructor has provided you with different types of prey that vary in size and shape. Your group should have 100 of each prey type. Your instructor has also provided a delineated habitat for you to use. Distribute your prey evenly in this habitat, and be sure to mix the prey so that each type is found throughout the habitat.

STEP 4 Establish your hypotheses!

1. Which prey type do you think will be the most fit and avoid capture more often than the other prey types?
2. Which predator do you think will be the most fit and succeed in capturing the most prey?

STEP 5 Simulate hunting session 1. Distribute yourselves (the predators) around the habitat full of prey. You will be given 60 seconds to hunt for prey. You must pick up the prey with your feeding apparatus and place it in your cup (your predator's mouth). Your cup must remain flat on the table or ground at all times and cannot be used to help you scrape or scoop up prey. You may hunt prey that is being hunted by other predators. Set a timer for 60 seconds (or use a watch to monitor the time), and begin hunting.

STEP 6 Record your results. After the end of your 60 seconds of hunting, record the number of prey collected by each predator in the appropriate chart provided here. Be sure to identify which prey types you have designated as prey 1, 2, and 3 in the chart. Set these captured prey aside. They are dead and will not produce offspring.

STEP 7 Reestablish the predators. The predators that collected the most prey are well fed and producing offspring. The predator that collected the least amount of prey is underfed and will not produce offspring. This underfed predator will not participate in future hunts, but the group member should still follow along and record the outcomes of the others' hunts in his or her charts. In addition, if any predators have broken their feeding apparatus, they are also underfed and do not produce offspring. They, too, will sit out future hunts, but continue recording results.

STEP 8 Reestablish the environment. Only the prey that have survived the hunt can reproduce. Determine the number of survivors for each prey type. Add in enough of each surviving prey type to double their numbers in the next generation. Be sure to distribute them evenly in the habitat.

STEP 9 Repeat Steps 5 through 8 for two more hunting sessions. Continue to eliminate underfed predators and double surviving prey. Be sure to keep track of your results in the charts provided below for each hunting session.
