

Biology Chapter 4 Book Notes

Section 1

- Nucleic acids are polymers, just as proteins are polymers
 - But instead of being assembled from amino acids, **nucleic acids** are made up of monomers called **nucleotides**.
- **3 components of a nucleotide:**
 - Phosphate group
 - 5-carbon sugar
 - Nitrogen containing base
 - **The phosphate group is bonded to the sugar molecule, which is bonded to the base**
- The sugar is the central component of the nucleotide
 - The five carbons in this sugar are labeled w/ numbers and prime symbols (') to provide a frame of reference
 - **Ex) the base is attached to the 1' carbon and the phosphate group is attached to the 5' carbon**
- Ribonucleotides are monomers of ribonucleic acid (RNA) and deoxyribonucleotides are the monomers of deoxyribonucleic acid (DNA)
 - Sugars: Ribose in ribonucleotides, deoxyribose in deoxyribonucleotides
 - **Deoxy- lacking in oxygen**
- Ribonucleotides and deoxyribonucleotides also differ in one of their nitrogenous bases
 - These bases belong to structural groups called **purines** and **pyrimidines**
 - Purines: adenine (A) and guanine (G)
 - Pyrimidines: cytosine (C), uracil (U), and thymine (T).
 - **Ribonucleotides use uracil (U), while deoxyribonucleotides use thymine (T).**
- Based on data from Stanley Miller and researchers who followed ([Chapter 2](#)), most biologists accept the idea that amino acids could have been synthesized early in Earth's history
 - Miller-like laboratory simulations have shown that nitrogenous bases and many different types of sugars, including ribose, can be synthesized readily under conditions that mimic the prebiotic soup
 - What they found was striking—the minerals preferentially bound to ribose, effectively enriching and concentrating ribose on their surface from a pool of diverse sugars
- Nucleotides polymerize via condensation reactions between the hydroxyl on the sugar component of one nucleotide and the phosphate group of another nucleotide
 - The reaction forms a new covalent bond between the nucleotides, and a molecule of water is released.
 - It's called a **phosphodiester linkage**, or a phosphodiester bond

Flourishing Within Limits to Growth Sven Erik Jørgensen, Brian D. Fath, Søren Nors Nielsen, Federico M. Pulselli, Daniel A. Fiscus, Simone Bastianoni, 2015-07-03 Decades of research and discussion have shown that the human population growth and our increased consumption of natural resources cannot continue there are limits to growth This volume demonstrates how we might modify and revise our economic systems using nature as a model The book describes how nature uses three growth forms biomass information and networks resulting in improved overall ecosystem functioning and co development As biomass growth is limited by available resources nature uses the two other growth forms to achieve higher resource use efficiency Through a universal application of the three R s reduce reuse and recycle nature thus shows us a way forward towards better solutions However our current approach dominated by short term economic thinking inhibits full utilization of the three R s and other successful approaches from nature Building on ecological principles the authors present a global model and futures scenario analyses which show that implementation of the proposed changes will lead to a win win situation In other words we can learn from nature how to develop a society that can flourish within the limits to growth with better conditions for prosperity and well being

Final Causality in Nature and Human Affairs Richard F. Hasing, 1997 Teleology the inquiry into the goals or goods at which nature history God and human beings aim is among the most fundamental yet controversial themes in the history of philosophy Are there ends in nonhuman nature Does human history have a goal Do humanly unintended events of great significance express some sort of purpose Do human beings have ends prior to choice The essays in this volume address the abiding questions of final causality The chapters are arranged in historical order from Aristotle through Hegel to contemporary anthropic principle cosmology

Running Out Of Time Stephen F. Ledoux, 2014-04-21 Behaviorology is the natural science of why human behavior happens Like other natural scientists behaviorologists investigate human behavior through experimental research and apply their findings across every behavior related field from advertising to zoo keeping for humanity s benefit
