Valencia, Valencia presents the most comprehensive theory based analysis to date on how society and schools are structurally organized and maintained to impede the optimal academic achievement of low SES marginalized K 12 Black and Latino Latina students compared to their privileged White counterparts The book interrogates how society contributes to educational inequality as seen in racialized patterns in income wealth housing and health and how public schools create significant obstacles for students of color as observed in reduced access to opportunities e g little access to high status curricula knowledge Valencia offers suggestions for achieving equal education e g implementing fairness of school funding improving teacher quality and providing students of color access to multicultural education by disrupting structural racism Considering the rapid aging of the White population and the sharp decline of White youth coupled with the explosive growth in people of color this book argues that the American Imperative must be to assiduously mount an effort to provide an excellent education for students of color who the nation will depend on for a sizable proportion of its work force Book Features Examines how society and schools are failing Black and Latino Latina students principally Mexican Americans who are by far the largest Latino Latina group Uses theoretical frameworks that draw from analysis of structural inequality critical race theory anti deficit thinking narratives class by race covariation and an asset based perspective of students of color Discusses the American Imperative and the personal and economic consequences of not investing in students of color [Breaking Images](#) Brian Greer, David Kollosche, Ole Skovsmose, 2024-12-11 Mathematics is an activity something we do not just something inert that we study This rich collection begins from that premise to explore the various social influences institutional forces and lived realities that shape and mould the study and practice of mathematics and are moulded by it in turn These twenty one essays explore questions of mathematics as a topic of philosophy but also the nature and purpose of mathematics education and the role of mathematics in moulding citizens It challenges the biases and prejudices inherent within uninformed histories of mathematics including problems of white supremacy the denial of cultural difference and the global homogenization of teaching methods In particular the book

contrasts the effectiveness of mathematics and science in modelling physical phenomena and solving technical problems with its ineffectiveness in modelling social phenomena and solving human problems and urges us to consider how mathematics might better meet the urgent crises of our age The book addresses anybody who is interested in reflecting on the role of mathematics in society from different perspectives It allows mathematicians to ponder about the cultural connections of mathematics and provides new perspectives for philosophical sociological and cultural studies of mathematics Because of the book's emphasis on education in mathematics it is especially interesting for mathematics teachers and teacher educators to challenge their understanding of the subject

Numerical Development - From cognitive functions to neural underpinnings  
Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24

Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers
