### **Development of HfO<sub>2</sub>-Based Ferroelectric Memories for Future CMOS Technology Nodes** Stefan Ferdinand

Müller, 2016-04-08 This thesis evaluates the viability of ferroelectric Si HfO<sub>2</sub> and its derived FeFET application for non volatile data storage At the beginning the ferroelectric effect is explained briefly such that the applications that make use of it can be understood Afterwards the latest findings on ferroelectric HfO<sub>2</sub> are reviewed and their potential impact on future applications is discussed Experimental data is presented afterwards focusing on the ferroelectric material characteristics of Si HfO<sub>2</sub> that are most relevant for memory applications Besides others the stability of the ferroelectric switching effect could be demonstrated in a temperature range of almost 400 K Moreover nanosecond switching speed and endurance in the range of 1 million to 10 billion cycles could be proven Retention and imprint characteristics have furthermore been analyzed and are shown to be stable for 1000 hours bake time at 125 °C Derived from the ferroelectric effect in HfO<sub>2</sub> a 28 nm FeFET memory cell is introduced as the central application of this thesis Based on numerical simulations the memory concept is explained and possible routes towards an optimized FeFET cell are discussed Subsequently the results from electrical characterization of FeFET multi structures are presented and discussed By using Si HfO<sub>2</sub> it was possible to realize the world's first 28 nm FeFET devices possessing a 10k cycling endurance and an extrapolated 10 year data retention at room temperature The next step towards a FeFET memory is represented by connecting several memory cells into matrix type configurations A cell concept study illustrates the different ways in which FeFET cells can be combined together to give high density memory arrays For the proposed architectures operational schemes are theoretically discussed and analyzed by both electrical characterization of FeFET multi structures and numerical simulations The thesis concludes with the electrical characterization of small FeFET memory arrays First results show that a separation between memory states can be achieved by applying poling and incremental step pulse programming ISPP sequences These results represent an important cornerstone for future studies on Si HfO<sub>2</sub> and its related applications *Supersymmetry* Vladimir K. Dobrev, 2018-09-24

With applications in quantum field theory general relativity and elementary particle physics this four volume work studies the invariance of differential operators under Lie algebras quantum groups and superalgebras This third volume covers supersymmetry including detailed coverage of conformal supersymmetry in four and some higher dimensions furthermore quantum superalgebras are also considered Contents Lie superalgebras Conformal supersymmetry in 4D Examples of conformal supersymmetry for D 4 Quantum superalgebras **The Sun, the Solar Wind, and the Heliosphere** Mari Paz Miralles, Jorge Sánchez Almeida, 2011-01-06 This volume represents the state of the art of the science covered by the International Association of Geomagnetism and Aeronomy IAGA Division IV Solar Wind and Interplanetary Field It contains a collection of contributions by top experts addressing and reviewing a variety of topics included under the umbrella of the

division It covers subjects that extend from the interior of the Sun to the heliopause and from the study of physical processes in the Sun and the solar wind plasma to space weather forecasts The book is organized in 6 parts the solar interior the solar atmosphere the heliosphere heliophysical processes radio emissions and coordinated science in the Sun Earth system In addition we highlight some of the results presented during the IAGA Division IV symposia in the 11th Scientific Assembly of IAGA in Sopron Hungary on 23 30 August 2009 which was planned simultaneously with this book     **Multiplatform**
