Guerraggio, J. Thierfelder, 2004-03-10 The book is intended for people graduates researchers but also undergraduates with a good mathematical background involved in the study of static optimization problems in finite dimensional spaces It contains a lot of material from basic tools of convex analysis to optimality conditions for smooth optimization problems for non smooth optimization problems and for vector optimization problems The development of the subjects are self contained and the bibliographical references are usually treated in different books only a few books on optimization theory deal also with vector problems so the book can be a starting point for further readings in a more specialized literature Assuming only a good even if not advanced knowledge of mathematical analysis and linear algebra this book presents various aspects of the mathematical theory in optimization problems The treatment is performed in finite dimensional spaces and with no regard to algorithmic questions After two chapters concerning respectively introductory subjects and basic tools and concepts of convex analysis the book treats extensively mathematical programming problems in the smooth case in the nonsmooth case and finally vector optimization problems Self contained Clear style and results are either proved or stated precisely with adequate references The authors have several years experience in this field Several subjects some of them non usual in books of this kind in one single book including nonsmooth optimization and vector optimization problems Useful long references list at the end of each chapter **Notices of the American Mathematical Society** American Mathematical Society, 1979
