

# The Biology of Mind

## CHAPTER OVERVIEW

Chapter 2 is concerned with the functions of the brain and its component neural systems, which provide the basis for all human behavior. Under the direction of the brain, the nervous and endocrine systems coordinate a variety of voluntary and involuntary behaviors and serve as the body's mechanisms for communication with the external environment.

The brain consists of the brainstem, the thalamus, the cerebellum, the limbic system, and the cerebral cortex. Knowledge of the workings of the brain has increased with advances in neuroscientific methods. Studies of split-brain patients have also given researchers a great deal of information about the specialized functions of the brain's right and left hemispheres.

Many students find the technical material in this chapter difficult to master. Not only are there many terms for you to remember, but you must also know the organization and function of the various divisions of the nervous system. Learning this material will require a great deal of rehearsal. Working the chapter review several times, drawing and labeling brain diagrams, and mentally reciting terms are all useful techniques for rehearsing this type of material.

**NOTE:** Answer guidelines for all Chapter 2 questions begin on page 52.

## CHAPTER REVIEW

First, skim each section, noting headings and boldface items. After you have read the section, review each objective by answering the fill-in and essay-type questions that follow it. As you proceed, evaluate your performance by consulting the answers beginning on page 52. Do not continue with the next section until you understand each answer. If you need to, review or reread the section in the textbook before continuing.

## Introduction (pp. 47–48)

**Objective 1:** Explain why psychologists are concerned with human biology, and describe the ill-fated phrenology theory.

1. In the most basic sense, every idea, usual, unusual, and behavior that an individual has ever experienced is a \_\_\_\_\_ phenomenon.
2. The theory that linked our mental abilities to bumps on the skull was \_\_\_\_\_.
3. Researchers who study the links between biology and behavior are called \_\_\_\_\_.
4. We are made up of smaller and smaller \_\_\_\_\_; we are also part of larger \_\_\_\_\_. Thus, we are \_\_\_\_\_ systems.

## Neural Communication (pp. 48–54)

**Objective 2:** Describe the parts of a neuron, and explain how its impulses are generated.

1. Our body's neural system is built from billions of nerve cells, or \_\_\_\_\_. Information arriving in the brain and spinal cord from the body travels in \_\_\_\_\_ neurons. Instructions from the brain and spinal cord are sent to the body's tissues via \_\_\_\_\_ neurons. The neurons that enable internal communication within the brain are called \_\_\_\_\_.
