*Austrian Economics, Money and Finance* Thomas Mayer, 2017-11-10 The financial crisis has exposed severe shortcomings in mainstream monetary economics and modern finance It is surprising that these shortcomings have not led to a wider debate about the need to overhaul these theories Instead mainstream economists have closed ranks to defend existing theories and public authorities have expanded their interference in markets This book investigates the problems associated with mainstream monetary economics and finance and proposes alternatives based on the Austrian school of economics This school emanated from the work of the nineteenth century Austrian economist Carl Menger and was developed further by Eugen von Böhm-Bawerk Ludwig von Mises and Friedrich August von Hayek In monetary economics the Austrian school regards the creation of money by banks through credit extension as a key source of economic instability From this follows the need for a comprehensive reform of our present monetary system In a new monetary order money could be issued by both public and private institutions and there would be no need for fractional reserve banking Instead of creating money banks would intermediate it In finance the Austrian school rejects the notion of rational expectations and measurable risk Individuals use their subjective knowledge to gather and evaluate information and they act in a world of radical uncertainty Hence markets are not efficient nor can portfolios be built on the basis of known probability distributions of asset prices as described in the modern finance literature This book explores the need for a new theoretical foundation for asset pricing and investment management that will give practitioners more useful orientation **Improving Quality in American Higher Education** Richard Arum, Josipa Roksa, Amanda Cook, 2016-05-02 An ambitious comprehensive reimagining of 21st century higher education Improving Quality in American Higher Education outlines the fundamental concepts and competencies society demands from today's college graduates and provides a vision of the future for students faculty and administrators Based on a national multidisciplinary effort to define and measure learning outcomes the Measuring College Learning project this book identifies essential concepts and competencies for six disciplines These essential concepts and competencies represent efforts towards articulating a consensus among faculty in biology business communication economics history and sociology disciplines that account for nearly 40 percent of undergraduate majors in the United States Contributions from thought leaders in higher education including Ira Katznelson George Kuh and Carol Geary Schneider offer expert
