Multi-Stage Simultaneous Lot-Sizing and Scheduling Florian Seeanner, 2013-05-13 Due to a varying product demand, changing product mix, and different production speeds, bottlenecks may shift between the stages. In that case, a simultaneous lot sizing and scheduling of these stages is recommendable. Hence, an improved version of the General Lot Sizing and Scheduling Problem for Multiple production Stages (GLSPMS) was developed. Moreover, several reformulation techniques were applied to this model to solve it exactly. Besides a new meta heuristic which combines the principles of Variable Neighborhood Decomposition Search (VNDS) and Exchange, was implemented to find good solutions even for a real world problem case. Finally, further model extensions, e.g., for scarce setup resources, were proposed.
