

## Kinematics

## Measuring Motion

## LO 1.1.1.1

As presented in this section, design effective questions for students:

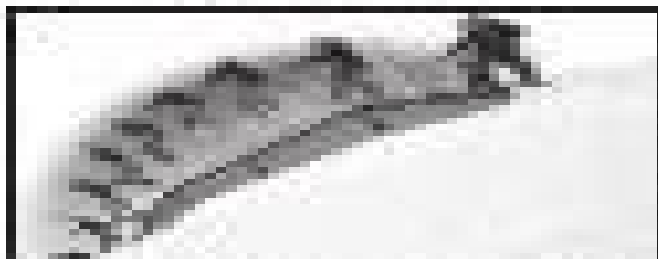

- Which instrument?
- Which motion characteristics best describe the used apparatus?
- Which measuring tool is chosen to observe this question and how is it used?

## What is Motion?

Experiments in the science of physics focus on motion through direct observing from a position that allows motion to be observed directly. Motion is the movement of an object or a system from one position to another. The motion of an object is described by its position, velocity, and acceleration.

Experiments in the science of physics focus on motion through direct observing from a position that allows motion to be observed directly. Motion is the movement of an object or a system from one position to another. The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration.

In addition, students will be asked to design questions and use appropriate measuring tools to observe motion. The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration.

The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration.

Students are encouraged to design questions and use appropriate measuring tools to observe motion. The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration.

## Looking Closer

Students will be asked to design questions and use appropriate measuring tools to observe motion. The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration.

## Looking Closer

The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration.

The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration.

## Looking Closer

The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration.

The motion of an object is described by its position, velocity, and acceleration. The motion of an object is described by its position, velocity, and acceleration.
