Life Science Benchmark Test:

Assessment of Higher Order Thinking Skills Gregory Schraw, Daniel H. Robinson, 2011-10-01 This volume examines the assessment of higher order thinking skills from the perspectives of applied cognitive psychology and measurement theory. The volume considers a variety of higher order thinking skills including problem solving, critical thinking, argumentation, decision making, creativity, metacognition, and self-regulation. Fourteen chapters by experts in learning and measurement comprise four sections which address conceptual approaches to understanding higher order thinking skills, cognitively oriented assessment models, thinking in the content domains, and practical assessment issues. The volume discusses models of thinking skills as well as applied issues related to the construction, validation, administration, and scoring of performance-based selected response and constructed response assessments. The goal of the volume is to promote a better theoretical understanding of higher order thinking in order to facilitate instruction and assessment of those skills among students in all K-12 content domains as well as professional licensure and certification settings.

Laser in Environmental and Life Sciences Peter Hering, Jan Peter Lay, Sandra Stry, 2013-04-17 Studies of environmental conditions have become more and more important for our knowledge about the complex processes resulting from natural and man-made influences on our environment. During recent years, new analytical techniques have been developed that are mainly based on laser spectroscopy. They are not only more sensitive and reach lower detection limits, but they also give more detailed information on the species under investigation and their interactions with the environment. They therefore can considerably deepen our understanding of correlations between different processes and their causes, which is the precondition for avoiding ecological damage and for strengthening effective engagement in environmental protection. Also in life sciences, revolutionary new techniques for diagnostics have been introduced which allow a thorough investigation of biological processes in plants and their dependence on environmental conditions. In particular for medical applications, these new, mainly non-invasive techniques have influenced medical diag-

nostics and treatment considerably This book deals with these very interesting interdisciplinary subjects which demand experience and knowledge about both fields the basic physics of the detection techniques and the relevant problems in environmental and life sciences Therefore authors from a broad area of fundamental and applied research have contributed to this book which is organized in 4 sections Remote sensing of the atmosphere detection techniques for liquid and solid samples applications to gaseous substances and aerosols and finally applications in biology and medicine Issues in Life Sciences—Zoology: 2013 Edition ,2013-05-01 Issues in Life Sciences Zoology 2013 Edition is a ScholarlyEditions book that delivers timely authoritative and comprehensive information about Emu Research The editors have built Issues in Life Sciences Zoology 2013 Edition on the vast information databases of ScholarlyNews You can expect the information about Emu Research in this book to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of Issues in Life Sciences Zoology 2013 Edition has been produced by the world s leading scientists engineers analysts research institutions and companies All of the content is from peer reviewed sources and all of it is written assembled and edited by the editors at ScholarlyEditions and available exclusively from us You now have a source you can cite with authority confidence and credibility More information is available at <http://www.ScholarlyEditions.com>
