Life Science Caps 2014 Paper:

The Metabolism of Islands Simron Singh, Marina Fischer-Kowalski, Marian Chertow, 2021 This book makes the case for why we should care about islands and their sustainability Islands are hotspots of biocultural diversity and home to 600 million people that depend on one sixth of the earth's total area including the surrounding oceans for their subsistence Today they are at the frontlines of climate change and face an existential crisis Islands are however potential hubs of innovation that are uniquely positioned to be leaders in sustainability and climate action This volume argues that a full fledged program on island industrial ecology is urgently needed with the aim of offering policy relevant insights and strategies to sustain small islands in an era of global environmental change The nine contributions in this volume cover a wide range of applications of socio metabolic research from flow accounts to stock analysis and their relationship to services in space and time They offer insights into how reconfiguring patterns of resource use will allow island governments to build resilience and adapt to the challenges of climate change

The Financialized Economy Alexander Styhre, 2021-04-04 Social science theorists from various scholarly disciplines have contributed to a recent literature that examines how the finance industry has expanded and now wields increasing influence across a variety of economic fields and industries In some cases this tendency towards a more sizeable and influential finance industry has been referred to as the financialization of the economy This book explains how what is referred to as the finance led economy arguably a more neutral and less emotionally charged term than financialization is premised on a number of conditions institutional relations and theoretical propositions and assumptions and indicates what the real economic consequences are for market actors and households The book provides a theoretically condensed but empirically grounded account of the contemporary finance led economy in many cases too complicated in its design and rich in detail to be understood equally by insiders empirical research indicates and lay audiences It summarizes the relevant literature and points at two empirical cases the construction industry and life science venturing to better illustrate how the expansion of the finance industry has contributed to the capital formation process and how the sovereign state has actively assisted this process It offers a credible yet accessible overview of the economic conditions that will arguably shape economic affairs for the foreseeable future The book will find an audience amongst a variety of readers including graduate students management scholars policymakers and management consultants

Macrocognition: The Science and Engineering of Sociotechnical Work Systems Paul Ward, Robert R. Hoffman, Gareth E. Conway, Jan Maarten Schraagen, David Peebles, Robert J. B. Hutton, Erich J. Petushek, 2018-02-28 The increasing complexity of work systems and changes in the nature of workplace technology over the past century have resulted in an exponential shift in the nature of work activities from physical labor to cognitive work Modern work systems have many characteristics that make them cognitively complex They can be highly interactive comprised of multiple agents and artifacts information may be limited and distributed across space and time task goals are frequently ill defined conflicting dynamic and emergent planning may only

be possible at general levels of abstraction or require adaptive solutions some degree of proficiency or expertise is required the stakes are often high and uncertainty time constraints and stress are seldom absent To complicate matters further cognition in complex work settings is typically constrained by broader professional organizational and institutional practice and policy These features of cognitive work present significant challenges to scientific methodology and theory and subsequent design of reliable interventions Historically philosophers and scientists have attempted to understand the mental activities experienced during cognitive work at multiple levels of analysis using divergent methods Some have examined cognition at an associative contextual functional or holistic level relying on naturalistic methods to understand the higher mental processes as they work in harmony during goal directed behavior Others have embraced experimental methods and favored internal over external validity often reducing cognition to a psychology of fundamental acts such as short term memory access with millisecond shifts in attention More recently Macrocognition has evolved as a complementary paradigm Macrocognitive researchers have studied the cognitive functions and processes associated with skilled adaptive collaborative and resilient cognitive work in the context of the aforementioned complexities of psychotechnical and sociotechnical work systems Typically this research has been carried out using cognitive task analytic techniques that draw on both naturalistic and quasi experimental methods The primary goals of research in Macrocognition are to better understand cognitive adaptations to complexity to increase our theoretical understanding of the organism environment relations by studying the mapping between cognitive work and real world demands and to promote use inspired research capable of improving system performance

China's Peasant Agriculture and Rural Society Jan Douwe van der Ploeg, Jingzhong Ye, 2016-05-20 China's agriculture and rural society has undergone rapid changes in recent years Many poorer farmers and younger people have moved to cities and yet China has an immense challenge to feed a growing and more affluent population This book provides a bottom up view of China's agriculture showing how the many millions of Chinese peasants make a living It presents a vivid description of the mechanisms used by rural households to

defend and sustain their livelihoods increase their agricultural production and improve the quality of their lives The authors examine the newly emerging trajectories of entrepreneurial and capitalist farming and assess whether such alternatives will be able to meet the enormous social economic and environmental challenges that China faces The book also explores the paradigm that has underpinned the organisation and development of China's agriculture from ancient times to the present day This shows the importance of balancing in the Chinese model as compared to the one sided imposition of continual modernization in the western model It is argued that such balancing is at the core of the current Sannong policy referring to the three ruralities of food sovereignty wellbeing for peasant households and an attractive countryside

The Field of Water Policy Franck Poupeau, Brian O'Neill, Joan Cortinas Muñoz, Murielle Coeurdray, Eliza Benites-Gambirazio, 2019-12-06 Bringing together the analysis of a diverse team of social scientists this book proposes a new approach to environmental problems Cutting through the fragmented perspectives on water crises it seeks to shift the analytic perspectives on water policy by looking at the social logics behind environmental issues Most importantly it analyzes the dynamic influences on water management as well as the social and institutional forces that orient water and conservation policies The first work of its kind The Field of Water Policy Power and Scarcity in the American Southwest brings the tools of Pierre Bourdieu's field sociology to bear on a moment of environmental crisis with a study of the logics of water policy in the American Southwest a region that allows us to see the contest over the management of scarce resources in a context of lasting drought As such it will appeal to scholars in the social and political sciences with interests in the environment and the management of natural resources
