

A healthcare worker in blue scrubs is assisting an elderly patient in a hospital room. The patient is seated in a chair, and the worker is standing next to them, holding a device. The background shows a typical hospital room with shelves and medical equipment.

5 Key Principles of Safe Moving and Handling

Principle 1: Prepare and Plan Ahead

Assess necessary equipment, clearly explain full sequence of movements in advance

Principle 2: Use the right body moves.

Adopt a stance and core brace that keeps the back stable, match forces smooth and gradual to how the body moves.

Principle 3: Move Feet Don't Twist

Keep stepping your feet forward smoothly in line with your task without sudden twists in your upper body.

Principle 4: Hold correctly

Maintain comfortable joint positions during lifts and transfers so motion flows instead of catching

Principle 5: Reduce Load and Friction

Allow slide sheets, hoists and gait belts to bear loads so staff avoid directly forcing or resisting body weight
