**Reading Radio 4** Macdonald Daly, 2016-12-01 This book is a study of contemporary Radio 4 output covering the entire broadcast day. Radio is largely neglected by media and cultural studies. The small body of existing work on Radio 4 is predominantly historical, focusing on institutional history or sociological, focusing on contemporary BBC editorial and journalistic practices. Reading Radio 4 by contrast analyses contemporary Radio 4 programmes entirely from the point of view of today's listener. Individual chapters correspond to all existing Radio 4 timeslots in the entire broadcast day of 19 hours 40 minutes from 5 20am to 1 00am. The study, while academic in approach, aims to promote an informed and critical appreciation of Radio 4 for all listeners as well as students of the media.

**Production Chemicals for the Oil and Gas Industry, Second Edition** Malcolm A. Kelland, 2014-03-13  
Production chemistry issues result from changes in well stream fluids both liquid and gaseous during processing. Since crude oil production is characterized by variable production rates and unpredictable changes to the nature of the produced fluids, it is essential for production chemists to have a range of chemical additives available for rectifying issues that would not otherwise be fully resolved. Modern production methods, the need to upgrade crude oils of variable quality and environmental constraints demand chemical solutions. Thus oilfield production chemicals are necessary to overcome or minimize the effects of the production chemistry problems. Production Chemicals for the Oil and Gas Industry, Second Edition discusses a wide variety of production chemicals used by the oil and gas industry for down hole and topside applications both onshore and offshore. Incorporating the large amount of research and applications since the first edition, this new edition reviews all past and present classes of production chemicals, providing numerous difficult-to-obtain references, especially SPE papers and patents. Unlike other texts that focus on how products perform in the field, this book focuses on the specific structures of chemicals that are known to deliver the required or desired performance information that is very useful for research and development. Each updated chapter begins by introducing a problem such as scale or corrosion for which there is a production chemical. The author then briefly discusses all chemical and nonchemical methods to treat the problem and provides in-depth descriptions of the structural classes of relevant production chemicals. He also mentions, when available, the environmental properties of chemicals and whether the chemical or technique has been successfully used in the field. This edition includes two new chapters and nearly 50 percent more references.

**Capability Building and Global Innovation Networks** Michael Gastrow, Glenda Kruss, 2017-10-02 This book explores the dynamics of global innovation networks and their implications for development. Knowledge is often seen as the main determinant of economic growth, competitiveness and employment. There is a strong causal interaction between capability building and the growth in demand for and supply of

technical and organizational innovation This complex of skills knowledge and innovation holds great potential benefit for development particularly in the context of developing countries However despite evidence of the increasing importance of knowledge and innovation there has been relatively little research to understand the distribution and coordination of innovation and knowledge intensive economic activities on a global scale and what this might mean for economic development Each chapter though sharing an underlying conception of innovation systems innovation networks and their relation to capability building and development takes a different theoretical stance The authors explore the emerging relationship between competence building and the structure of global innovation networks thus providing a valuable new perspective from which to critically assess their development potential This book was originally published as a special issue of *Innovation and Development* *White Paper on Science and Technology* ,2013 **Preventing Weaponization of CNS-acting Chemicals** Michael Crowley, Malcolm Dando, 2025-11-24 Recent advances in neuroscience the study of the mechanisms within the brain that underlie our behaviours and what happens when these go wrong have been profound However benignly intended neurological research that seeks to understand dysfunction in the central nervous system CNS could be misused for example in the development of novel CNS acting chemical agent weapons for use in armed conflict and also in repression of civilian populations This book follows a 3 step Holistic Arms Control approach examining the biochemical agents and relevant physiological systems they affect as well as associated dual use technologies that need to be regulated analysing a range of potentially applicable international law international arms control disarmament and other instruments and attendant control regimes constraining misuse and finally providing a strategy to strengthen existing regulatory mechanisms as well as suggest new measures to prevent the misuse of the neurosciences and associated dual use technologies without limiting the widespread health and other societal benefits that flow from their benign application Suitable for biochemists and researchers in the areas of neuroscience neurochemistry and neuropharmacology this book will also be of interest for those working in arms control disarmament and related legal fields as well as forensic medicine and toxicology *Parliamentary Debates (Hansard)*.
