**Collaborating for Inquiry-Based Learning** Virginia L. Wallace, Whitney N. Husid, 2016-12-05 This newly updated and expanded second edition of Collaborating for Inquiry Based Learning explains effective IBL scaffolding and the school librarian's role as the lead in the collaborative process of inquiry based teaching. Want to learn how to easily put inquiry theory into practice in your school library? This newly revised and expanded practical resource links pedagogical theory, research, and practical application of Inquiry Based Learning (IBL). An important resource for school librarians, classroom teachers, and school library preparation programs, this thoroughly updated second edition of Collaborating for Inquiry Based Learning explores Inquiry Based Learning in greater depth and addresses new educational insights. Readers will learn the new research model PLAN and understand how the steps Prepare, Learn, Analyze, and New Discoveries define a deliberative metacognitive process that offers simplicity and flexibility. This step by step guide moves new and experienced educators seamlessly from assessment of students' needs and prior knowledge through formative and summative assessments to reflection. It offers practical applications for immediate use by educators with students and makes it clear why the school librarian is ideally suited to be the lead in the collaborative process of inquiry based teaching. This comprehensive guide to IBL is appropriate as a main text or supplementary reading for courses in instructional design and curriculum.

**Meeting the Challenges to Measurement in an Era of Accountability** Henry Braun, 2016-01-29 Under pressure and support from the federal government, states have increasingly turned to indicators based on student test scores to evaluate teachers and schools, as well as students themselves. The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests, such as in mathematics or English language arts, with a focus on grades 4-8. Teachers in these subject areas, however, constitute less than thirty percent of the teacher workforce in a district. Comparatively little has been written about the measurement of achievement in the other grades and subjects. This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas, with particular attention to their use in the evaluation of teachers and schools. It addresses traditional end-of-course tests as well as alternative measures such as portfolios, exhibitions, and student learning objectives. In each case, issues related to design and development, psychometric considerations, and validity challenges are covered from both a generic and a content-specific perspective. The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research-based applications of educational measurement and assessment. Edited by leading experts, these books are comprehensive and practical resources on the latest developments in the field. The Open Access version of this book is available at <http://www.taylorfrancis.com> and has been made available under a Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 license.

**Technologies in Biomedical and Life Sciences Education** Harry J. Witchel, Michael W. Lee, 2022-06-24 This contributed volume focuses on understanding the educational strengths and weaknesses of mediated

content including media as a learning supplement in comparison to traditional face to face learning Each chapter includes research on and a broad brush summary of approaches to combining life sciences education with educational technologies The chapters are organized into four main sections each of which focuses on a key question regarding the consequences of incorporating media into education In this regard the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity Further they address the ongoing discussion as to whether students need to be present for lectures and on how having agency in their own learning can improve both retention and conceptual understanding To link the content to current events the authors also shed light on the impact that the COVID 19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies Consequently the book offers life science educators valuable guidance on the technologies already available and an outlook on what is yet to come
