Quero-Garcia, Amy Iezzoni, Joanna Pulawska, Gregory A Lang, 2017-07-12 Sweet and sour cherries *Prunus avium* and *Prunus cerasus* are important fruit crops for which demand is high and growing. A significant number of new varieties, rootstocks and training systems have been released or developed in recent years in order to improve the efficiency and profitability of cherry orchards. *Cherries: Botany, Production and Uses* covers the genetics, ecophysiology, production, protection and uses of cherries. Presenting up to date scientific data and applied information, this book is invaluable for researchers, teachers and all professionals working in the cherries value chain. Powdery Mildew Disease of Crucifers: Biology, Ecology and Disease Management

Govind Singh Saharan, Naresh K. Mehta, Prabhu Dayal Meena, 2019-11-22 Powdery mildew disease is the fourth most widespread disease in cruciferous crops and a devastating effect causing significant losses in terms of quality and quantity in rapeseed and mustard. Powdery mildews are also a favourable host pathosystem model for basic research on host-parasite interactions, developmental morphology, cytology and molecular biology to identify the effector proteins, genes governing different biological functions. This book provides a comprehensive overview of all the published information in the field for researchers, teachers, students, extension experts, industrialists and farmers and includes illustrations, photographs, graphs, figures, tables, histograms, micrographs, electron micrographs and flow charts to aid understanding. It also describes standardized, reducible techniques. The book discusses each disease in detail, describing the distribution, symptomatology, host range, yield losses and disease assessment as well as the taxonomy, morphology, phylogeny, variability, sporulation, survival and perpetuation of the pathogen. Further, it explores topics such as spore germination, infection, pathogenesis, disease cycle, epidemiology, forecasting, fine structures, host resistance, biochemical, histological, genetic and molecular aspects such as cloning and mapping of R genes, sources of resistance, disease resistance breeding and the genetics of host-parasite interactions and disease management. *Plant-Microbe-Insect Interactions in Ecosystem Management and Agricultural Praxis*

Gero Benckiser, Krishnamurthy Kumar, Anton Hartmann, Bernd Honermeier, 2019-04-03 Nature's high biomass productivity is based on biological N₂ fixation (BNF) and biodiversity. Benckiser 1997, Benckiser and Schnell 2007. Although N₂ makes up almost 80% of the atmosphere's volume, living organisms need it in only small quantities, presumably due to the paucity of natural ways of transforming this recalcitrant dinitrogen into reactive compounds. N shortage is commonly the most important limiting factor in crop production. The synthesis of ammonium from nitrogen and hydrogen, the Haber-Bosch (H-B) process, invented more than 100 years ago, became the holy grail of synthetic inorganic chemistry and removed the most ubiquitous limit on crop yields. H-B opened the way for the development and adoption of high-yielding cultivars for monoculturing by organic and precision farming. With N over-fertilization and pesticide application, monoculturing farmers

could approach Nature's high biomass productivity by causing side effects the scientific world is investigating This eBook presents the complexity the scientific world is facing in understanding the soil microbe plant animal cooperation the millions of taxonomically phylogenetically and metabolically diverse above below ground species involved in shaping the ever changing biogeochemical process patterns being of great significance for food production networks and yield stability Because ecosystem management and agricultural praxis are still largely conducted in isolation the aim of this Frontiers eBook is to gather and interconnect plant microbe insect interaction research of various disciplines studied with a broad spectrum of modern physical chemical biochemical and molecular biological agronomical techniques The goal of this Research Topic was to gain a better understanding of microbe plant insect compositions functioning interactions health fitness and productivity
