Computational Science and its Applications A. H. Siddiqi, R. C. Singh, G. D. Veerappa Gowda, 2020-10-20 Computational science is a rapidly growing multidisciplinary field concerned with the design implementation and use of mathematical models to analyze and solve real world problems It is an area of science that spans many disciplines and which involves the development of models and allows the use of computers to perform simulations or numerical analysis to understand problems that are computational and theoretical Computational Science and its Applications provides an opportunity for readers to develop abilities to pose and solve problems that combine insights from one or more disciplines from the natural sciences with mathematical tools and computational skills This requires a unique combination of applied and theoretical knowledge and skills The topics covered in this edited book are applications of wavelet and fractals modeling by partial differential equations on flat structure as well as on graphs and networks computational linguistics prediction of natural calamities and diseases like epilepsy seizure heart attack stroke biometrics modeling through inverse problems interdisciplinary topics of physics mathematics and medical science and modeling of terrorist attacks and human behavior The focus of this book is not to educate computer specialists but to provide readers with a solid understanding of basic science as well as an integrated knowledge on how to use essential methods from computational science Features Modeling of complex systems Cognitive computing systems for real world problems Presentation of inverse problems in medical science and their numerical solutions Challenging research problems in many areas of computational science This book could be used as a reference book for researchers working in theoretical research as well as those who are doing modeling and simulation in such disciplines as physics biology geoscience and mathematics and those who have a background in computational science **The Science of Baseball** A. Terry Bahill, 2017-12-19 This book describes the dynamic collisions between baseballs softballs and bats and the intricate modeling of these interactions using only Newton's basic principles and the conservation laws of physics Veteran baseball science author Terry Bahill explains models for the speed and spin of balls and bats and equations for bat ball collisions at a level accessible to high school and undergraduate physics students engineering students and most importantly students of the science of baseball Unlike other more technical accounts of these phenomena that exhibit similar rigor the models presented in this volume use only basic physical principles to describe simple collision configurations Elucidating the most important factors for understanding bat performance bat weight moment of inertia the coefficient of restitution and characteristics of humans swinging the bats Dr Bahill also explains physical aspects of the ideal bat and the sweet spot Explains how to select or design an optimal baseball or softball bat and create models for bat ball collisions using only fundamental principles of mechanics from high school physics Describes the results of the collision between baseball and bat using basic mathematics such as equations for the speed of the ball after the collision bat speed after the collision and bat rotation after the collision Accessible to high school and undergraduate students as well as non technical aficionados of the

science of baseball Dr Bahill's book is the perfect tool for teaching how to solve some of baseball's basic science problems Using only simple Newtonian principles and the conservation laws Dr Bahill explains how to model bat ball collisions Also he derives equations governing the flight of the ball and proceeds to show what factors affect air density and how this density affects the ball's flight And as a unique addition to his fine book he provides advice for selecting the optimal bat a surprising bonus Dave Baldwin PhD Major League pitcher 1966 1973 lifetime Major League ERA 3.08 If I were the General Manager of a baseball team I would tell my people to write a ten page paper describing what this book contains that could improve our performance I think the book provides the foundation for change Bruce Gissing Executive VP Operations retired Boeing Commercial Airplanes I had a chance to read your research and I fully agree with your findings Baseball Legend Ted Williams in a 1984 letter to the author *Engineering Mechanics of Materials* B.
