Artificial Neural Networks for Knowledge Extraction in Spatiotemporal Dynamics and Weather Forecasting Matthias
Karlbauer,2025-03-18 This thesis explores the potential of machine learning methods for improving weather forecasts Since
weather is considered a spatiotemporal process that evolves over space through time the thesis first investigates the design
choices required for machine learning models to simulate synthetic spatiotemporal processes such as the two dimensional
wave equation It then develops a method for analyzing machine learning models that enables the extraction of unknown
process relevant context that parameterizes an observed simulated spatiotemporal process of interest Relating these
extracted factors to physical properties leads the thesis to physics aware machine learning where it explores how to fuse
process knowledge from physics with the learning ability of artificial neural networks Given the insights from those
investigations a competitive deep learning weather prediction model is designed to understand which design choices support
data driven algorithms to learn a meaningful function that predicts realistic and stable states of the atmosphere over
