

N. Gregory Mankiw – Principles of Economics

Chapter 6. SUPPLY, DEMAND, AND GOVERNMENT POLICIES

Solutions to Problems and Applications

1. If the price ceiling of \$40 per ticket is below the equilibrium price, then quantity demanded exceeds quantity supplied, so there will be a shortage of tickets. The policy decreases the number of people who attend classical music concerts, since the quantity supplied is lower because of the lower price.
2.
 - a. The imposition of a binding price floor in the cheese market is shown in Figure 3. In the absence of the price floor, the price would be P_e and the quantity would be Q_e . With the floor set at P_f , which is greater than P_e , the quantity demanded is Q_d , while quantity supplied is Q_s , so there is a surplus of cheese in the amount $Q_s - Q_d$.
 - b. The farmers' complaint that their total revenue has declined is correct if demand is elastic. With elastic demand, the percentage decline in quantity would exceed the percentage rise in price, so total revenue would decline.
 - c. If the government purchases all the surplus cheese at the price floor, producers benefit and taxpayers lose. Producers would produce quantity Q_s of cheese, and their total revenue would increase substantially. But consumers would buy only quantity Q_d of cheese, so they are in the same position as before. Taxpayers lose because they would be financing the purchase of the surplus cheese through higher taxes.

 - a. The equilibrium price of Frisbees is \$5 and the equilibrium quantity is 5 million Frisbees.

From Economics to Political Economy Tim B. Thornton, 2016-07-22 The discipline of economics has been increasingly criticized for its inability to illuminate the workings of the real world and to provide reliable policy guidance for the major economic and social challenges of our time A central problem in contemporary economics and a problem from which many of its other failings flow is its lack of plurality By a lack of plurality it is meant that contemporary economics lacks diversity in its methods theories epistemology and methodology It is also meant that economics has become far less interdisciplinary From Economics to Political Economy offers an explanation as to why economics has become so determinedly non pluralistic and also gives considerable attention to exploring and evaluating promising strategies for reform These strategies include developing a pluralist economics under the label of political economy within other social science departments such as departments of politics Along the way the reader will learn about the worldwide student movement seeking greater pluralism in economics encounter some dramatic case studies in intellectual suppression gain a fuller sense of the nature of contemporary economics and explore the relationship between economics and other social sciences This book is of interest to any social scientist particularly those with interests in economics and politics

Empirical Vector Autoregressive Modeling Marius Ooms, 2012-12-06 1 1 Integrating results The empirical study of macroeconomic time series is interesting It is also difficult and not immediately rewarding Many statistical and economic issues are involved The main problems is that these issues are

so interrelated that it does not seem sensible to address them one at a time As soon as one sets about the making of a model of macroeconomic time series one has to choose which problems one will try to tackle oneself and which problems one will leave unresolved or to be solved by others From a theoretic point of view it can be fruitful to concentrate oneself on only one problem If one follows this strategy in empirical application one runs a serious risk of making a seemingly interesting model that is just a corollary of some important mistake in the handling of other problems Two well known examples of statistical artifacts are the finding of Kuznets pseudo waves of about 20 years in economic activity Sargent 1979 p 248 and the spurious regression of macroeconomic time series described in Granger and Newbold 1986 6 4 The easiest way to get away with possible mistakes is to admit they may be there in the first place but that time constraints and unfamiliarity with the solution do not allow the researcher to do something about them This can be a viable argument
