

Name(s): Abigail Wilder**Photosynthesis and Respiration Model**

Essential Question: What is the relationship between photosynthesis and respiration?

Scientific modeling is an activity that aims to make the world easier to understand. There are many types of models, some are mathematical, and some are graphical models that help us visualize the subject. The graphic below is a model that attempts to show the interdependence of two cellular processes: respiration and photosynthesis.

Your goal is to examine the model, focus on the key details to answer the essential question.

**I. Examine Details**

1. In what cell organelle does photosynthesis occur? chloroplast cellular respiration? mitochondria
2. What are the three things needed for photosynthesis? 6CO_2 , $6\text{H}_2\text{O}$, and sunlight (energy) highlight these on the diagram in green.
3. What are the two products of photosynthesis? glucose ($\text{C}_6\text{H}_{12}\text{O}_6$), and 6O_2 highlight yellow
4. What are the two things needed for cellular respiration? glucose + oxygen highlight blue
5. What are the three products of cellular respiration? CO_2 , H_2O , and energy highlight purple

Becklin,Joy K. Ward,Danielle A. Way,2021-05-31 Changes in atmospheric carbon dioxide concentrations and global climate conditions have altered photosynthesis and plant respiration across both geologic and contemporary time scales Understanding climate change effects on plant carbon dynamics is critical for predicting plant responses to future growing conditions Furthermore demand for biofuel fibre and food production is rapidly increasing with the ever expanding global human population and our ability to meet these demands is exacerbated by climate change This volume integrates physiological ecological and evolutionary perspectives on photosynthesis and respiration responses to climate change We explore this topic in the context of modeling plant responses to climate including physiological mechanisms that constrain carbon assimilation and the potential for plants to acclimate to rising carbon dioxide concentration warming temperatures and drought Additional chapters contrast climate change responses in natural and agricultural ecosystems where differences in climate sensitivity between different photosynthetic pathways can influence community and ecosystem processes Evolutionary studies over past and current time scales provide further insight into evolutionary changes in photosynthetic traits the emergence of novel plant strategies and the potential for rapid evolutionary responses to future climate conditions Finally we discuss novel approaches to engineering photosynthesis and photorespiration to improve plant productivity for the future The overall goals for this volume are to highlight recent advances in photosynthesis and respiration research and to identify key challenges to understanding and scaling plant physiological responses to climate change The integrated perspectives and broad scope of research make this volume an excellent resource for both students and researchers in many areas of plant science including plant physiology ecology evolution climate change and biotechnology For this volume 37 experts contributed chapters that span modeling empirical and applied research on photosynthesis and respiration responses to climate change Authors represent the following seven countries Australia 6 Canada 9 England 5 Germany 2 Spain 3 and the United States 12 **AI Technologies for Crop Breeding** Jen-Tsung Chen,2025-10-01 AI Technologies for Crop Breeding offers the latest insights into the use of artificial intelligence models to improve plant health and production Presenting applications of AI technologies in plant biology biotechnology and crop breeding it explores practices for the mitigation of biotic and abiotic stressors as well as other plant growth challenges AI based technologies are expected to

advance approaches to plant functional genomics and multiple omics resulting in smarter and more efficient crop breeding for next generation agriculture helping to address the challenges of the increasing human population and the globally changing climate AI tools such as machine learning particularly deep learning have been applied to predict chief players in complicated biological networks increasing the understanding of in depth mechanisms of plant pathogen and plant environment interactions Additionally responses of plants facing stress can be modeled using AI technologies and the resulting data are valuable not only to plant stress physiology but also for stress resilient and disease resistant crop breeding This book introduces AI technologies for studying plant biology focusing on machine learning and deep learning models for integrating multiple omics approaches and revealing the knowledge of plant functional genomes Technological advancements and emerging applications of machine learning and deep learning in genomic selection genome wide association study GWAS phenotyping and constructing phenomics and transcriptomics are also featured in this book AI Technologies for Crop Breeding is an ideal reference for researchers academics and advanced level students and professors in the fields of plant sciences plant stress physiology bioinformatics systems biology and crop breeding Reviews AI based technologies in crop plant functional genomics Presents integration of AI tools with high throughput omics Advances understanding of the potential impact of AI technologies in addressing the UN Sustainable Development Goals

What Sustains Life? Dan W. Urry, 2007-10-18 In the sixth century BC Thales of Miletus father of the Ionian Enlightenment setting aside the mythic views of Homer and Hesiod asked What is the world made of and thereby became the first physicist He answered that water is the basis of all matter and thereupon became an often cited example of early Greek reasoning gone astray However not only did Thales initiate scientific inquiry but also with reference to living things he was substantially correct Living organisms are composed mostly of water but the unique role of water in living organisms has been wanting for adequate description From the perspective of D H Lawrence Water is H₂O hydrogen two parts oxygen one part but there is a third thing that makes it water and nobody knows what that is From our perspective and as advanced in this volume the interaction of water with dissimilar groups comprising each protein molecule the competition for water between these disparate substituents along chain molecules of living organisms and the freedom of motion that water gives protein chains combine to provide the physical basis of Life

Challenges and Solutions in Forecasting and Decision-Making in Marine Economy and Management Xuemei Li, Kevin Li, Junjie Wang, Song Ding, 2025-08-11 The marine economy and management pertain to the sustainable utilization of marine resources through internal and external coordination across departments with a focus on maximizing social and economic benefits However the persistence of activities such as

overfishing offshore oil spills and excessive coastal development has led to escalating issues like offshore eutrophication ocean acidification warming and marine plastic pollution posing significant threats to marine sustainability In alignment with the United Nations Sustainable Development Goal 14 substantial progress has been achieved by ocean management researchers in analyzing fishery resource management optimization of marine industrial structures development of marine energy and adaptation of marine climate change These studies hold crucial theoretical significance and practical value for understanding the state of the marine economy guiding management practices ensuring marine ecological security and fostering sustainable ocean development
