## DESCRIPTION

The ARIES®-SLX is an intelligent, addressable, single loop Fire Alarm-Suppression control unit that supports Kidde Fire Systems' wide array of suppression products and is backward-compatible with legacy Kidde, Fenwal, Chemetron and Mariott agent release devices including control heads and initiators. It is compact, networkable and supports both simple and complex programming for the demanding operational requirements of single- and multi-hazard fire suppression applications.

The unit provides one signaling line circuit, two notification-appliance circuits, two releasing circuits, and two combo circuits that are user-configurable for NAC, or release to actuate one solenoid valve for control of a special extinguishing system or a pre-action/deluge sprinkler system. The unit has four on-board relays, a 5.4 amp filtered and regulated power supply, and provides charging for batteries up to 70 AH.

The ARIES-SLX annunciates alarm, trouble, and supervisory events via an 80-character, backlit LCD display with integral status LEDs. Event acknowledgment, alarm silence, and system reset are accomplished with dedicated control keys. Basic user and maintenance operations such as viewing history or isolation commands to initiating points and system outputs are performed via the control keys and associated digit keys. A security password prevents unauthorized access to the system.

## SIGNALING LINE CIRCUIT

The Signaling Line Circuit (SLC) is the communications path between the ARIES-SLX control unit and SmartOne field devices. It uses a highly-efficient, fully-digitized protocol to communicate with up to 255 SmartOne initiating devices including DS-PS photoelectric smoke detectors, DS-HFS heat detectors, DS-SD duct detectors, monitor modules and control modules (some mix and match limitations apply).

SmartOne devices are supervised and power-limited. Each SmartOne initiating device has a microprocessor, memory, and decision-making algorithms to interrupt normal control unit communications and initiate an alarm signal. This distributed intelligence to the sensor level ensures rapid response to all types of initiating signals.

The SLC can be wired for Class A or Class B operation. Optional isolator modules can be used for a Class X circuit. All SLC wiring must be twisted, unshielded, low-capacitance, fire-alarm wire.
