**Airborne LiDAR Reflective Linear Feature Extraction for Strip Adjustment and Horizontal Accuracy Determination** Charles K. Toth, 2009 ODOT's Office of Aerial Engineering OAE has been using an Optech 3070 ALTM airborne LiDAR system for about four years. The introduction of LiDAR technology was a major development towards improving the mapping operations. The overall experiences are excellent as evidenced by numerous projects where highly accurate surface data were produced in an unprecedentedly short time. As is typically with new technology OAE has identified areas for improvements in terms of achieving better accuracy and increasing data processing efficiency. In particular the horizontal accuracy of the LiDAR product required further attention. The objectives of this research were to 1 introduce ground control to LiDAR by using road pavement markings that can be precisely surveyed by ODOT's system 2 perform a strip adjustment for seamless integration of strips into the final product 3 improve the horizontal accuracy in order to better characterize the final product and 4 improve accuracy both horizontal and vertical to use ground control that is less labor intense requires no or limited surveying and imposes less restrictions in normal field operations.
