- Fill soils that support loadings and foundations must be designed, modified and tested.

Abstract

- Surface drainage must be directed to a storm water conveyance or other approved point of collection that does not create a hazard.
- Lots must be graded to drain surface water away from foundation walls.
- Gravel must fill a min. of 2" within the first 30 ft

[illegible]

- Where quantifiable data indicate expansive soils, compressible soils, shifting soils or other questionable soil characteristics, the building official must determine whether to require a soil test.
- In lieu of a complete geotechnical evaluation, however, the values in Table B101.1.1.

RISK FACTORS FOR STRENGTH

- On-grade: If the top of any exterior foundation wall extends above the structure of the street gutter at point of discharge or the point of an approved drainage device a min. of 6" is required.
- Alternate: Foundations are permitted subject to the approval of the Building Official, provided that it can be demonstrated that required drainage to the point of discharge and away from the structure is achieved in all circumstances.

- Used mostly in warm-climates, where being a close to the ground and the frost line is close to the surface.
- In this system the footing is shallow and the ground floor is a concrete slab.
- Many slab-on-grade systems allow the concrete footing to be negative, up to 200mm, in the ground, at the same time.
