English Language Teaching: Issues and Challenges S. Udhayakumar, K. Vellaichamy, English as a global language plays a vital role in every one's life. Students think that English language opens the door of the world for their future life. But as an alien language, the learners find it very difficult to understand the language. Not only to understand but to read, write and speak. A social language may be learnt quickly as there are many chances to encounter with public people who speak this as their mother tongue or a community language. But English is not a social language so all learners face difficulty. This difficulty may be eased out by adopting different methodology for learning English language. This could be possible only for educational institutions. In India and non-English speaking countries, English could be learnt only in schools, colleges and Universities. So it is very important that methodology for English teaching should be often checked and updated. Earlier chalk and talk method was adopted. In due course it underwent many changes and it now has become student-centric and the teacher has become a facilitator for the students in teaching learning process. The classroom once a four-wall room with a single board and small chalk piece has now become a smart classroom with white smart board and an electronic pen stick. Even an LKG classroom is connected to the world and with one click the whole world comes into the classroom through internet services and displayed on the white board. If Shakespeare is taught, his manuscript of the text is displayed and his life is shown as a video film. If the Universe is taught to the students, the video of the Universe is shown and the real scientists are explaining the doubts of the students and they chat with the learners. As we are living in such a modern and advanced period, teaching methodology for English teaching should be updated to meet the challenges of today's world. Education is the only way for the humanity to live happily and peacefully. Education connects the whole world for the benefit of the human race which is not possible for animal beings and other creatures also. In this process, English language plays a crucial role and an edition of book chapters may benefit the student and teaching community to update the teaching methodology of English language. So this edition is brought to fulfill the need of the current society.

Life Cycle Assessment and Water Management-related Issues Joaquim Comas Matas, Sadurní Morera Carbonell, 2012-09-03. Life Cycle Assessment is a scientific methodology to assess the environmental impact of a product system or service along its life cycle. This starts with the extraction of raw materials, follows with the manufacturing, distribution and use stages, and ends with the treatment of waste or byproducts. All this information allows us to avoid transfer of burdens between life cycle stages, geographical regions or environmental impact categories. For example, reducing the amount of material to manufacture a product, i.e. a washing machine, a car, or a wastewater treatment plant, while not increasing energy consumption during its use or consumption. In September 2012, from the 3rd to the 7th, the Laboratory of Environmental and Chemical Engineering LEQUIA and the Institute of the Environment of the University of Girona organized the 12th International Summer School for the Environment ISSE focused on Life Cycle Assessment and Water issues. It was framed within the European project Ecotech Sudoe. www
