

- The physical trait expressed because of the ~~phenotype~~ is the Phenotype. GENOTYPE
- If there are three alleles and 4 possible phenotypes, it must be a(n) Codominant trait.
- If there are 2 alleles but three different phenotypes, it must be a(n) Incompletely Dominant trait.
- Alleles are different forms of the same gene and typically one is dominant over the other.
- If hair color is a gene, brown hair is ~~the~~ ^{A(n)} allele.
- Mendel's Law of Independent Assortment basically explains that there is no link between different genes (e.g. hair color & eye color).
- Mendel's Law of Segregation simply explains that each parent only donates one of their two copies of each gene to their offspring.
- Most traits have a lot of variety because most traits are not due to a single gene, but are polygenic.
- If an individual has two of the same allele, their genotype is Homozygous yet if an individual has two different alleles, their genotype is Heterozygous.
- The genetic makeup (or genotype) determines the physical trait (or phenotype) and not the other way around.
