Manual For Kaeser Asd 4:

Genetics and Epigenetics of Psychiatric Diseases, 2nd Edition Cunyou Zhao, Weihua Yue, Zhexing Wen, 2020-10-09

Psychiatric diseases have a highly complex etiology aggregating in families but not segregating in a traditional Mendelian manner. Recent approaches to understanding the causes of psychiatric disease have focused on describing the genetic contribution to major psychiatric illnesses. The use of large scale genome wide association studies (GWAS) and exome sequencing has enabled a systematic exploration of genetic risk factors and identified over 100 independent genomic loci significantly associated with psychiatric diseases. However, there remains uncertainty about the causal genes involved in disease pathogenesis and how their function is regulated. Since many GWAS variants reside in non coding regions, the disease associated common variants might be enriched in regulatory domains including enhancers and regions of active chromatin state. These lead us to focus on the possible role of non sequence based genomic variation in health and disease. Of particular interest are epigenetic modifications that regulate gene expression through modifications to DNA, RNA, histone proteins and chromatin. The availability of high throughput profiling methods for quantifying epigenomic modifications in large numbers of samples has enabled us to perform epigenome wide association studies (EWAS) aimed at screening methylomic variations associated with environmental exposure and disease. Thus, systematic integration of genetic, epigenetic and epidemiological approaches will contribute to improving our understanding of the molecular mechanisms underlying disease phenotypes.

Handbook of Parent-Implemented Interventions for Very Young Children with Autism Michael Siller, Lindee

Morgan, 2018-08-09. This handbook offers practical strategies and evidence based parent implemented interventions for very young children with autism spectrum disorder (ASD). It explores this important subject within the context of rapidly increasing numbers of toddlers who are diagnosed with ASD during the second year of life. The handbook discusses how parents of young children with ASD can effectively be supported, taught and coached to implement evidence based parenting strategies and intervention techniques and describes a broad range of developmentally appropriate programs at the family, community and service delivery levels. In addition, the handbook examines individual differences in parenting, cognitions, emotions and practices and proposes strategies for supporting the varying capacities of diverse families to meet the needs of young children with ASD. Chapters provide diverse coverage spanning cultural, socio-economic differences as well as differences in family structure, parenting, cognitions, emotions and practices, parental learning styles and access to social support. Featured topics include: Supporting families of high risk infants who have an older sibling with ASD; The use of video feedback strategies in parent mediated early ASD intervention; The Incredible Years (IY) Parent Program for preschool children with ASD and language delays; Self help for parents of children with ASD; The Family Implemented TEACCH for Toddlers (FITT) support model; Parent implemented interventions for underserved families in Taiwan; Family and provider based interventions in South Asia. The Handbook of Parent Implemented Interventions for Very Young Children with Autism is a must have.
