

POGIL: Mass Extinctions

What is the biological significance of mass extinction?

Why? Evidence suggests that five mass extinctions have occurred throughout the history of the Earth—the most famous of which led to the extinction of the dinosaurs. Scientists are still studying the causes of these catastrophic events. What can we learn from mass extinctions, and what is their impact on the diversity of life forms found on Earth?

Model 1 – Extinction Over Time

- What are the names of the three eras identified on the x-axis in Model 1?
The eras are named the Paleozoic, Mesozoic, and the Cenozoic.
- To what does the y-axis on the graph in Model 1 refer? (Include the unit of this variable.)
The y-axis refers to total extinction rates (families per million years).
- According to Model 1, approximately how long did each of these eras last?
 - Paleozoic It lasted roughly 291 million years.
 - Mesozoic It lasted roughly 185.5 million years.
 - Cenozoic It lasted roughly 65.5 million years.
- Circle the five major mass extinctions on the graph in Model 1.
Look on the graph.
- List the period in which each mass extinction begins and ends.
 - Mass Extinction 1 begins in O and ends in S.
 - Mass Extinction 2 begins in D and ends in C.
 - Mass Extinction 3 begins in Tr and ends in J.
 - Mass Extinction 4 begins in C and ends in P.
 - Mass Extinction 5 begins in P and ends in N.

Mass Extinctions and Their Aftermath A. Hallam, P. B. Wignall, 1997-09-11 The first book to review all the evidence concerning both the dinosaur extinctions and all the other major extinctions of plant animal terrestrial and marine life in the history of life All the extinction mechanisms are critically assessed including meteorite impact anoxia and volcanism Why do mass extinctions occur The demise of the dinosaurs has been discussed exhaustively but has never been out into the context of other extinction events This is the first systematic review of the mass extinctions of all organisms plant and animal terrestrial and marine that have occurred in the history of life This includes the major crisis 250 million years ago which nearly wiped out all life on Earth By examining current paleontological geological and sedimentological evidence of environmental changes the cases for explanations based on climate change marine regressions asteroid or comet impact anoxia and volcanic eruptions are all critically evaluated **The End of Evolution** Peter Douglas Ward, 1994 On Mass extinction and the preservation of biodiversity *Mass Extinctions* Stephen K. Donovan, S. K. Donovan, 1989

Mass-Extinction Debates William Glen, 1994-11-01 The history of life on Earth is punctuated by half a dozen puzzling mass extinctions that constitute the benchmarks of the geologic time scale These great breaks in the continuity of the fossil record have invited a wide array of scientific speculation The most thoroughly studied of the mass extinctions occurred 65 million years ago when most life on Earth incl the dinosaurs perished Two rival hypotheses have emerged to account for this catastrophic event the impactor hypothesis sees the earth bombarded with deadly meteorites while the competing volcanist hypothesis evokes gigantic volcanic eruptions This book examines the arguments and behavior of the scientists who have been locked in conflict over the competing hypotheses □□□□ **Earth`s Mass Extinctions** Douglas J Alford, Pakaket Alford, Most of the life that has lived on earth is now extinct This book explains what happened The quest now is how to keep human kind from becoming future fossils in the next Big Die Mass Extinctions and Their Aftermath, 2000 **Earth's Mass Extinctions** Brook Clearwater, AI, 2025-02-17 Earth s Mass Extinctions explores the cataclysmic events that have punctuated our planet s history threatening all life The book investigates the Big Five extinction events delving into their causes consequences and the subsequent rebound of life By examining the fossil record and geological history it uncovers patterns in environmental change that drove these crises One intriguing insight is how certain species survived offering clues to resilience in the face of global upheaval The book emphasizes that understanding these past events is crucial for addressing the modern biodiversity crisis The book takes an analytical approach presenting complex earth sciences information in an accessible manner It highlights the interplay between geological processes such as volcanism and asteroid impacts and biological systems The book also emphasizes the importance of understanding the selectivity of past extinction events providing a framework for assessing the vulnerability of modern ecosystems Each of the Big Five extinctions from the Ordovician Silurian to the Cretaceous Paleogene are presented as case studies exploring specific causes patterns and the

recovery of life that followed The book progresses from introducing the concept of mass extinctions and the geological timescale to detailed case studies and concludes by synthesizing lessons for conservation and environmental policy By studying these past extinction events readers gain invaluable insights into the processes that drive both the loss and recovery of biodiversity informing strategies to help mitigate the current biodiversity crisis and understand the long term sustainability of human activities

The Sixth Extinction (young readers adaptation) Elizabeth Kolbert,2024-02-06 In this young readers adaptation of the New York Times bestselling Pulitzer Prize winning The Sixth Extinction Elizabeth Kolbert tells us why and how human beings have altered life on the planet in a way no species has before Over the last half billion years there have been five mass extinctions when the diversity of life on earth suddenly and dramatically contracted Scientists around the world are monitoring the sixth extinction predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs Adapting from her New York Times bestselling Pulitzer Prize winning adult nonfiction Elizabeth Kolbert explores how humans are altering life on Earth **Mass Extinction** Ashraf M.T.

Elewa,2007-12-03 The present book combines three main aspects five major mass extinctions contributions on some other minor extinctions and more importantly contributions on the current mass extinction All three aspects are introduced through interesting studies of mass extinctions in diverse organisms ranging from small invertebrates to mammals and take account of the most accepted subjects discussing mass extinctions in insects mammals fishes ostracods and molluscs

Extinctions Michael Hannah,2021-09-16 Mass extinctions the fossil record and whether we can avoid a disastrous human made mass extinction event **When Life Nearly Died** Michael J. Benton,2003 Documents the mass extinction of nearly 90 percent of life during the Permian period discussing what caused the disaster and recent scientific research regarding catastrophic events **Mass Extinctions - Processes & Evidence** Stephen K. Donovan,1991-09-29 Mass extinctions the

apparently sudden and regular disappearance of large numbers of species from the fossil record are one of the mostly keenly contested and controversial debates in contemporary science A great deal of research effort has gone into the topic and certain claims notably that mass extinction eras display a periodicity of 24 million years have caused great interest and disagreement When Life Nearly Died Michael J. Benton,2015-08-24 The focus is the most severe mass extinction known in earth s history The science on which the book is based is up to date thorough and balanced Highly recommended Choice Today it is common knowledge that the dinosaurs were wiped out by a meteorite impact 65 million years ago that killed half of all species then living It is far less widely understood that a much greater catastrophe took place at the end of the Permian period 251 million years ago at least ninety percent of life on earth was destroyed When Life Nearly Died documents not only what happened during this gigantic mass extinction but also the recent renewal of the idea of catastrophism the theory that changes in the earth s crust were brought about suddenly in the past by phenomena that cannot be observed today Was the end Permian event caused by the impact of a huge meteorite or comet or by prolonged volcanic eruption in Siberia The

evidence has been accumulating and Michael J Benton gives his verdict at the end of the volume The new edition brings the study of the greatest mass extinction of all time thoroughly up to date In the twelve years since the book was originally published hundreds of geologists and paleontologists have been investigating all aspects of how life could be driven to the brink of annihilation and especially how life recovered afterwards providing the foundations of modern ecosystems

Bharti,2025-04-05 *Mass Extinctions Lessons from The Past Warnings for The Future* delves into the powerful story of life on Earth marked by resilience evolution and transformative loss Over the planet s 4 5 billion year history life has faced five major extinction events each one reshaping ecosystems altering evolutionary paths and challenging life s adaptability In this book readers will journey through these pivotal moments in Earth s past exploring the circumstances impacts and aftermaths of each extinction event and uncovering the critical lessons they hold for our future Starting with the ancient seas of the Ordovician Silurian period we follow the paths of mass extinctions through to the Cretaceous Paleogene extinction which famously ended the age of dinosaurs Each chapter provides a richly detailed narrative of how these extinctions unfolded combining insights from paleontology geology and biology to illustrate the causes and consequences of each dramatic shift The book also explores the evolutionary ingenuity displayed by life forms that survived adapted and flourished anew painting a picture of resilience and renewal At the heart of this exploration lies the ominous warning of a sixth extinction the Anthropocene extinction which many scientists believe is already underway driven by human activities like climate change habitat destruction and overexploitation of natural resources Unlike previous extinctions this one is unfolding at an accelerated rate and is within our power to influence This book not only illuminates the urgent need for conservation but also offers a profound reflection on humanity s role as both caretakers and disruptors of life s delicate balance *Mass Extinctions Lessons from The Past Warnings for The Future* is a compelling read for anyone interested in Earth s history environmental science or the urgent call for sustainability It is a testament to life s resilience a cautionary tale of nature s fragility and an inspiring reminder that understanding our past is crucial to shaping a sustainable future for generations to come

This is key takeaways and analysis of the book and NOT the original book *The Sixth Extinction* by Elizabeth Kolbert Key Takeaways Analysis Review Preview *The Sixth Extinction* is a book by award winning journalist Elizabeth Kolbert In this book the author demonstrates that species are dying out at a rate comparable to the previous mass extinctions and if the trend of global warming deforestation and pollution continues in its present course the numbers of extinct species will meet or exceed that rate of destruction This event will include the extinction of humanity What this means is that the current loss of life today will soon justify the term *The Sixth Extinction* a mass extinction like the one that destroyed the dinosaurs 65 million years ago When humans originated about 100 000 years ago they began to hunt some species into extinction Their ability to

outcompete other early hominids for food led to the extinction of those species including Neanderthals The extinction of species picked up steam when humans began transforming great swaths of forest and plains into farmland about 10 000 years ago Inside this Instaread of The Sixth Extinction Overview of the book Important People Key Takeaways Analysis of Key Takeaways About the Author With Instaread you can get the key takeaways and analysis of a book in 15 minutes We read every chapter identify the key takeaways and analyze them for your convenience **The Evolutionary Significance of Mass Extinctions** Michael J.
