

Safety Warnings & Cautions

1. Do not connect or disconnect to vehicle while engine is running.
2. Make sure everyone in close proximity to the test vehicle is wearing approved safety goggles or glasses.
3. Keep yourself, clothing, timing light and its leads clear of fan blades and all other moving engine parts. **The timing light makes rotating fan blades, pulleys, etc. appear stationary or slowed.**
4. Do not wear loose fitting clothing, watches, rings or other jewelry when testing vehicle.
5. Do not touch hot engine parts or allow test equipment near them. Also, do not place test equipment or tools on fenders or other places from which they could fall into the engine compartment.
6. Always use extreme care when working around high voltage spark plugs and coil terminals.
7. Gases produced by a battery are highly explosive.
8. Do not smoke, allow open flame or spark near battery.
9. Testing should be done in a well ventilated area.
10. When connecting timing light power leads, first connect positive lead (red) to positive (+) terminal and then negative lead (black) to a good vehicle ground. When disconnecting leads, disconnect negative lead first.
11. Do not create an electrical connection between battery terminals through jumper cables, tools, etc.
12. Exhaust gas contains deadly poison. Route vehicle exhaust outside if test area is not well ventilated.
13. Before performing a test with the engine running (unless manufacturer's manual states otherwise) set parking brake, place gear selector in neutral (standard transmission) or park (automatic transmission), block drive wheels, and disconnect the release mechanism if vehicle has automatic parking brake release.

Specifications

Operating Temperature Range	-40°F to 149°F (-40°C to 65°C)
Power Requirement	10 to 16 Volts DC
Useable Range	30 to 9,990 RPM
Timing Advance Range	0° to +180°

Functional Description

POWER LEADS have color-coded clip boots. Red lead connects to positive (+) terminal of 12 volt battery and black to a good vehicle ground.

INDUCTIVE PICKUP clamps over #1 cylinder spark plug wire (usually - see Equipment & Testing Tips #10) to monitor high voltage surges. Its signal controls the light flashes and is used for computing the RPM and timing reading.

LED DISPLAY displays engine speed from 0 to 9990 RPM and timing degrees from 0° to +180°. "Err" will be displayed if RPM exceeds 9990.

CONTROL PANEL has the following five function keys:

 (Tach/Advance) is depressed to select tachometer or timing reading.

 (Flash) is an "ON-OFF" switch for the flash function.

 (Increase) increases degrees of timing light advance up to 180°. After key is depressed one second, the MT2261A begins rapid advance.

 (Decrease) decreases degrees of timing light advance that have been entered. It operates in the same manner as the  (Increase) key. Pressing  (Decrease) when display reads "0" sets timing light to 180° advance.

// (Reset) automatically zeroes degrees of advance that have been entered with the  (Increase) key. "2261"

is displayed momentarily when // (Reset) is pressed. // (Reset) is also used to clear and restart the timing light if erroneous data is displayed.

Equipment & Testing Tips

1. The MT2261A Computerized Tach/Advance Timing Light can be powered by a negative or positive ground 12 volt DC power source. If the test vehicle has a different electrical system (6 or 24 volt system, etc), an auxiliary 12 volt battery may be used to power the timing light. If the battery terminals are difficult to access, an auxiliary battery may be used, or you can connect the positive lead to the alternator output terminal and the negative lead to a good vehicle ground.
2. If the MT2261A fails to operate, check power leads for good connections and the proper polarity, make sure inductive pickup jaws are firmly seated and that latch is in the lock position, and inspect inductive pickup's ferrite cores for cleanliness and damage.

CAUTION: Do not allow core pieces to contact metal objects. Damage to timing light can result.

1. Handle the inductive pickup with care. Dropping or sharp blows can damage the ferrite cores.
2. Occasionally inspect the inductive pickup for dirt or other foreign matter buildup on the ferrite cores. Clean with CRC Lectra - Motive 05018 Cleaner or equivalent. Spray surface with plastic tube tip 1" away. Dry with air hose, keeping nozzle at least 6" away.
3. Always refer to applicable manufacturer's test procedures and specifications before testing vehicle. Procedures and specifications may vary from vehicle to vehicle, even if they are of the same manufacturer, year, vehicle model, engine, etc. If a vehicle's timing procedure and specification are not readily available on
