Gustafsson,2018-12-20 Mental health problems often debut in early childhood and may last throughout adulthood thereby making early detection and intervention especially important The overarching aim of the present thesis was to identify

patterns of emotional and behavioural problems indicating mental health problems in preschool children To facilitate the detection of such problems early on one available screening instrument Strengths and Difficulties Questionnaire SDQ was validated The development and interaction of externalising problems in preschool children were studied over time Functioning and behaviour and their relations to protective and risk indicators in both environmental and personal characteristics were explored The long term goal was to increase knowledge about early identification of emotional and behavioural problems in preschool children in order to facilitate early intervention In Study I n 690 the subscales Hyperactivity and Conduct Problems were shown to be valid for children in the age group 1 3 years A reasonable level of validity was found for the age group 4 5 years when using the original SDQ four factor solution The preschool teachers considered most of the SDQ items relevant and possible to rate Based on the results of Study II n 815 a score of 12 on the SDQ Total Problems Scale is recommended as a cut off for Swedish preschool children There were significant differences between boys and girls on all subscales except for the Emotional subscale The Swedish norms for SDQ are to a large extent similar to findings from other European countries Study III n 195 showed that preschool children s conduct problems decrease over time Children exhibiting more initial hyperactivity at year 1 have less reduction in conduct problems over time i e the more hyperactivity early in life the more conduct problems at year 3 In Study IV n 197 children high in engagement and social interaction function well over time even in the presence of hyperactivity while children with low engagement and interaction alone or in combination with hyperactivity and conduct problems continue to have problems Stability was related to the existence of a larger number of protective or risk indicators respectively Taken together this thesis has shown that the SDQ can be used to identify preschool children at risk of developing mental health problems later in life

*New Horizons in Systemic Practice with Children and Families* Siv Merete Myra, Tone Grøver, Ulf Axberg, 2023-10-12 This open access book illustrates how systemic theory as both a meta theory and a relational organic theory can be a suitable framework for understanding and appreciating the new horizons of systemic practice with children and families in their various contexts The different chapters shed light on how systemic perspectives as they are presented in their varying contexts promote hope by giving room for reflections on uncertainty change opportunities interconnections and differences The authors describe and reflect on how systemic approaches can be useful for practitioners and make space for a multiplicity of different perspectives that address the needs of children and those assisting them in their various settings where children grow and develop in the context of their unique needs and challenges It covers safeguarding children s rights through parental
