element method software LS DYNA and LS PrePost Whereas lots of engineering cases that can be solved using this software The main highlight of this book is the cases that involve large deformations such as a crash box of vehicles or an impact of bullets These analyses can be applied in unlimited topic such as transportation aircraft defense and so on For example in defense application this simulations can be used to design bullet protection plate and also evaluate the anti ballistic performance without doing experiments that are usually very expensive and time consuming Therefore with this simulation we can carry out the design process more cheaply and faster This book contains detailed procedures for using LS DYNA and LS PrePost for cases of low speed collisions such as crash box impact up to high speed impact of a bullet Cases such as armor for combat vehicles to military standard buildings can use the method described in this book Other cases such as the bullet tip design can also be evaluated Thus the method in this book can also be adopted for other broader analyses **ACM**
