Manual Of Firemanship Volume 4:

Fire and Rescue Service manual Great Britain. Fire Service Inspectorate, 2007-03-07 Incidents involving rescue from road vehicles are dramatically increasing in frequency There are some 3500 deaths on the road each year with 35 000 serious injuries Modern motor vehicles are becoming safer for occupants due to advancement in technology so persons are more likely to survive high impact speeds but are also more likely to become entrapped The Fire and Rescue Service as the primary rescue service requires national guidance to ensure a similar standard of response anywhere in the UK This manual is designed to highlight current best practice with regard to vehicle rescue techniques and first responder trauma care Each chapter forms an independent reference source but the publication as a whole forms a complete guide Chapters cover vehicle design and construction dealing with incidents safety procedures operational procedures extrication equipment medical considerations and trauma care Integrated Personal Development System I P D S Appendices cover Highways Agency Fire and Rescue Service memorandum of understanding training and general information and emergency services personnel ESP aide mmoire The CD ROM Vehicle extrication techniques is a multi media guide to rescue tool handling and extrication techniques *Fire and Rescue Service operational guidance - railway incidents* Great Britain: Department for Communities and Local Government, Chief Fire & Rescue Adviser, 2012-04-27 The Fire and Rescue Service Operational Guidance Railway Incidents presents a framework for a safe system of work for operations at incidents involving railways It provides robust yet flexible guidance that can be adapted to the nature scale and requirements of the incident Incidents involving railways may generate intense media attention where the operations of the emergency services are rigorously scrutinised Whilst much of this attention is approving it will invariably focus on the preparedness of the emergency services and their operational effectiveness Such incidents may place significant demands on local fire and rescue services and often require a national co ordinated response from across the country *Architecture and Fire* Stamatis Zografos, 2019-06-12 Architecture and Fire develops a conceptual reassessment of architectural conservation through the study of the intimate relationship between architecture and fire Stamatis Zografos expands on the general agreement among many theorists that the primitive hut was erected around fire locating fire as the first memory of architecture at the very beginning of architectural evolution Following the introduction Zografos analyses the archive and the renewed interest in the study of archives through the psychoanalysis of Jacques Derrida He moves on to explore the ambivalent nature of fire employing the conflicting philosophies of Gaston Bachelard and Henri Bergson to do so before discussing architectural conservation and the relationship between listed buildings the function of archives and the preservation of memories from the past The following chapter investigates how architecture evolves by absorbing and accommodating fire while the penultimate chapter examines the critical moment of architectural evolution the destruction of buildings by fire with a focus on the tragic disaster at London s Grenfell Tower in 2017 Zografos concludes with thoughts on Freud s drive theory He argues the practice of

architectural conservation is an expression of the life drive and a simultaneous repression of the death drive which suggests controlled destruction should be an integral part of the conservation agenda Architecture and Fire is founded in new interdisciplinary research navigating across the boundaries of architecture conservation archival theory classical mythology evolutionary theory thermodynamics philosophy and psychoanalysis It will be of interest to readers working in and around these disciplines
