Mind On Statistics 4th Edition Utts:

Mind on Statistics (with Jmp Printed Access Card) Jessica M. Utts, Robert F. Heckard, 2015-03-27 MIND ON STATISTICS Fifth Edition helps you develop a conceptual understanding of statistical ideas and shows you how to find meaning in data. The authors, who are committed to changing any preconception you may have about statistics being boring, engage your curiosity with intriguing questions and explain statistical topics in the context of interesting, useful examples and case studies. You'll develop your statistical intuition by focusing on analyzing data and interpreting results rather than on mathematical formulation. As a result, you'll build both your statistical literacy and your understanding of statistical methodology. *Mind on Statistics* Jessica M. Utts, Robert F. Heckard, 2006-01 MIND ON STATISTICS emphasizes the conceptual development of statistical ideas and seeks to find meaning in data. Authors Jessica Utts and Robert Heckard satisfy students' natural curiosity by actively engaging them with inspiring questions and explaining statistical topics in the context of excellent examples and case studies. MIND ON STATISTICS balances the spirit of statistical literacy with the statistical methodology taught in general introductory statistics courses. The authors built the book on two learning premises: 1. New material is much easier to learn and remember if it is related to something interesting or previously known. 2. New material is easier to learn if students actively ask questions and find the answers for themselves. More than any other text available, MIND ON STATISTICS motivates students to develop their statistical intuition by focusing on analyzing data and interpreting results rather than on mathematical formulation. A wide range of interesting and real examples provides further motivation for students to learn about statistics. *Seeing Through Statistics (Book Only)* Jessica M. The Explanatory Autonomy of the Biological Sciences Wei Fang,2021-12-23 This book argues for the explanatory autonomy of the biological sciences It does so by showing that scientific explanations in the biological sciences cannot be reduced to explanations in the fundamental sciences such as physics and chemistry and by demonstrating that biological explanations are advanced by models rather than laws of nature To maintain the explanatory autonomy of the biological sciences the author argues against explanatory reductionism and shows that explanation in the biological sciences can be achieved without reduction Then he demonstrates that the biological sciences do not have laws of nature Instead of laws he suggests that biological models usually do the explanatory work To understand how a biological model can explain phenomena in the world the author proposes an inferential account of model explanation The basic idea of this account is that for a model to be explanatory it must answer two kinds of questions counterfactual dependence questions that concern the model itself and hypothetical questions that concern the relationship between the model and its target system The reason a biological model can answer these two kinds of questions is due to the fact that a model is a structure and the holistic relationship between the model and its target warrants the hypothetical inference from the model to its target and thus helps to answer the second

kind of question The Explanatory Autonomy of the Biological Sciences will be of interest to researchers and advanced students working in philosophy of science philosophy of biology and metaphysics
