For the following scenarios, determine whether the molecules in the scenario are moving by (S) simple diffusion, (F) facilitated diffusion, or (A) active transport.

8. F For water to travel across the cell membrane at a substantial rate, the water molecules travel through protein channels known as aquaporins.
9. S While water molecules are polar, they are also very small. One fact not mentioned in the video is that some water molecules are able to sequester directly through the phospholipid bilayer due to their small size.
10. F Charged ions are traveling through a cell membrane with the concentration gradient.
11. A Cells living the gut need to take in glucose, but at a certain time, the concentration of extracellular glucose is lower than the concentration already stored in the cells.
12. S At a certain time, glucose is in a high concentration outside of a cell and needs to travel through the membrane into the cell.

### Facilitated Diffusion via a Protein Channel

For the below image, label the 13. polar area and 14. non-polar area on the diagram.

Draw in 15. protein channel and 16. molecules that would represent a potential concentration gradient in facilitated diffusion via a protein channel on the diagram.

### Active Transport via a Protein Channel

For the below image, label the 17. polar area, and 18. non-polar area.
