[Remote-controlled Push Lawn Mower](#) Courtney Minnoe, 2022 A remote controlled lawn mower has been designed for those who have decreased mobility but still wish to take care of their property Through a mounted camera with real time feedback a person can track the exact location of the lawn mower through a monitor It uses easily ordered materials to transform a machine that requires significant physical labor into one that is accessible for all people By modifying a push lawn mower through added motors a motor driver batteries and other electronic components a person can operate this from afar with decent efficiency While both gas and battery powered lawn mowers are effective eliminating the usage of natural

gas as fuel has proven to reduce emissions and prevent environmental harm Every component was analyzed for local availability and affordability before its purchase ensuring that the average homeowner could access them To ensure safety a circuit breaker has been added as a failsafe to inhibit motor damage Upon testing small inconveniences were discovered but corrections were made to improve operations While autonomous lawn mowers have been released there are not many which are remote controlled on the market The lawn mower assembly is outlined with the inclusion of an instruction manual Ideally anyone with a push lawn mower could do this themselves with a DIY kit After construction the device will cut grass and be fully remote controlled once turned on manually With room for more modifications and upgrades this prototype creates a reliable and affordable standard that can be built upon with more time and resources
