HWM ,2004-02 Singapore s leading tech magazine gives its readers the power to decide with its informative articles and in depth reviews     *Electronics Buying Guide* ,2008     **The HDRI Handbook 2.0** Christian Bloch,2013-01-01 BONUS DVD ONLY WITH THE PRINT EDITION NOT AVAILABLE WITH eBooks In 2007 The HDRI Handbook was the first book to present this revolutionary new field to a larger audience These days HDRI is a fully mature technology available to everyone Real estate and landscape photographers have adopted it as part of their regular workflow it has become one of the hottest trends for ambitious amateurs and creative professionals alike and the modern movie industry would be completely dysfunctional without it Now The HDRI Handbook 2 0 redefines its own gold standard It has been completely rewritten and is packed with practical hints and tips background knowledge reference tools breathtaking artist portfolios and inspiring interviews The book includes dozens of new step by step tutorials Beginners will get a methodically solid introduction and advanced readers will be able to refine their technique to perfection Topics include Understanding the foundation of HDRI HDR software comparisons and evaluations Capturing HDR images today and tomorrow Tonemapping for creating superior prints HDR image processing and compositing Shooting and stitching HDR panoramas Image based lighting and CG rendering 2 0 updates include New cameras sensors and HDR beamsplitter rigs Open Camera Controller for endless auto bracketing Correct RAW pre processing and ghost removal Dozens of practical easy to follow tutorials A structured approach to tonemapping inspired by Ansel Adams Set etiquette and tips for capturing HDR panos for visual effects Seven artist spotlights showing unique perspectives on HDRI Seven crossword puzzles a fun way to test yourself BONUS DVD ONLY WITH THE PRINT EDITION NOT AVAILABLE WITH eBooks     **High Dynamic Range Video** Karol Myszkowski,Rafal Mantiuk,Grzegorz Krawczyk,2022-05-31 As new displays and cameras offer enhanced color capabilities there is a need to extend the precision of digital content High Dynamic Range HDR imaging encodes images and video with higher than normal 8 bit per color channel precision enabling representation of the complete color gamut and the full visible range of luminance However to realize transition from the traditional toHDRimaging it is necessary to develop imaging algorithms that work with the high precision data Tomake such algorithms effective and feasible in practice it is necessary to take advantage of the limitations of the human visual system by aligning the data shortcomings to those of the human eye thus limiting storage and processing precision Therefore human visual perception is the key component of the solutions we discuss in this book This book presents a complete pipeline forHDR image and video processing fromacquisition through compression and quality evaluation to display At the HDR image and video acquisition stage specialized HDR sensors or multi exposure techniques suitable for traditional cameras are discussed Then we present a practical solution for pixel values calibration in terms of photometric or radiometric quantities which are required in some technically oriented applications Also we cover the problem of efficient image and video compression and encoding either for storage or transmission purposes including the

aspect of backward compatibility with existing formats Finally we review existing HDR display technologies and the associated problems of image contrast and brightness adjustment For this purpose tone mapping is employed to accommodate HDR content to LDR devices Conversely the so called inverse tone mapping is required to upgrade LDR content for displaying on HDR devices We overview HDR enabled image and video quality metrics which are needed to verify algorithms at all stages of the pipeline Additionally we cover successful examples of the HDR technology applications in particular in computer graphics and computer vision The goal of this book is to present all discussed components of the HDR pipeline with the main focus on video For some pipeline stages HDR video solutions are either not well established or do not exist at all in which case we describe techniques for single HDR images In such cases we attempt to select the techniques which can be extended into temporal domain Whenever needed relevant background information on human perception is given which enables better understanding of the design choices behind the discussed algorithms and HDR equipment
