Paper – 2

(PRACTICAL)

(Maximum Marks: 30)

(Time allowed: Three hours)

(Candidates are allowed additional 15 minutes for only reading the paper.
They must NOT start writing during this time.)

The total time to be spent on the Planning Session and the Examination Session is three hours.

Planning session: 90 minutes

Examination session : 90 minutes

Note: Candidates are to be permitted to proceed to the Examination Session only after 90 minutes of the Planning session are over.

This paper consists of three problems from which candidates are required to attempt any one problem.

Candidates are expected to do the following:

1. Write an algorithm for the selected problem.
(Algorithm should be expressed clearly using any standard scheme such as pseudo code or in steps which are simple enough to be obviously computable.) [3]
2. Write a program in JAVA language. The program should follow the algorithm and should be logically and syntactically correct. [5]
3. Document the program using mnemonic names / comments, identifying and clearly describing the choice of data types and meaning of variables. [2]
4. Code / Type the program on the computer and get a printout (hard copy). Typically, this should be a program that compiles and runs correctly. [2]
5. Test run the program on the computer using the given sample data and get a printout of the output in the format specified in the problem. [5]
6. Viva-Voce on the Selected Problem. [3]

In addition to the above, the practical file of the candidate containing the practical work related to programming assignments done during the year is to be evaluated as follows:

- Programming assignments done throughout the year (by the teacher) [5]
- Programming assignments done throughout the year (by the Visiting Examiner) [5]

This Paper consists of 5 printed pages and 1 blank page.

Multiprocessor Computer Architectures Terry J. Fountain, Malcolm J. Shute, 1990 For over forty years most of the world has designed its computers after a single fashion This style which has come to be known as the von Neumann model after one of its originators is showing increasing signs of being inadequately powerful for future needs Efforts to discover alternative models for so long a trickle are at least becoming a flood This book reports on the current status of a number of these efforts This book is addressed to two main audiences First it is aimed at the reader who is new to the world of non von Neumann computers either in the area of design or that of application By taking the form of a catalogue of projects bound in a single volume it serves as a particularly convenient introductory text Thus it can be used to obtain a feel for the problems which designers are presently confronting and the solutions which they are developing Indeed the newcomer to the field with the benefit of a fresh and unbiased viewpoint may be in the best position to read through these collected reports and to identify some common point which has hitherto gone unnoticed or unexploited Second the book is aimed at the reader who is experienced in one particular area or discipline of non von Neumann computer design It serves as an introduction to hardware design for the computer scientist and as an introduction to parallel programming philosophy for the electronics engineer
