Manual Digsilent 14:

Modelling and Simulation of Power Electronic Converter Dominated Power Systems in PowerFactory Francisco M. Gonzalez-Longatt, José Luis Rueda Torres, 2020-11-02 This book provides an overview of power electronic converters for numerical simulations based on DIgSILENT PowerFactory It covers the working principles key assumptions and implementation of models of different types of these power systems The book is divided into three main parts the first discusses high voltage direct currents while the second part examines distribution systems and micro grids Lastly the third addresses the equipment and technologies used in modelling and simulation Each chapter includes practical examples and exercises and the accompanying software illustrates essential models principles and performance using DIgSILENT PowerFactory Exploring various current topics in the field of modelling power systems this book will appeal to a variety of readers ranging from students to practitioners

Intelligent Computing Techniques for Smart Energy Systems Akhtar Kalam, Khaleequr Rehman Niazi, Amit Soni, Shahbaz Ahmed Siddiqui, Ankit Mundra, 2019-12-16 The book compiles the research works related to smart solutions concept in context to smart energy systems maintaining electrical grid discipline and resiliency computational collective intelligence consisted of interaction between smart devices smart environments and smart interactions as well as information technology support for such areas It includes high quality papers presented in the International Conference on Intelligent Computing Techniques for Smart Energy Systems organized by Manipal University Jaipur This book will motivate scholars to work in these areas The book also prophesies their approach to be used for the business and the humanitarian technology development as research proposal to various government organizations for funding approval

Proceedings of International Conference on Data Science and Applications Mukesh Saraswat, Sarbani Roy, Chandreyee Chowdhury, Amir H. Gandomi, 2021-11-22 This book gathers outstanding papers presented at the International Conference on Data Science and Applications ICDSA 2021 organized by Soft Computing Research Society SCRS and Jadavpur University Kolkata India from April 10 to 11 2021 It covers theoretical and empirical developments in various areas of big data analytics big data technologies decision tree learning wireless communication wireless sensor networking bioinformatics and systems artificial neural networks deep learning genetic algorithms data mining fuzzy logic optimization algorithms image processing computational intelligence in civil engineering and creative computing

Advanced Smart Grid Functionalities Based on PowerFactory Francisco Gonzalez-Longatt, José Luis Rueda Torres, 2017-12-29 This book consolidates some of the most promising advanced smart grid functionalities and provides a comprehensive set of guidelines for their implementation evaluation using DIgSILENT Power Factory It includes specific aspects of modeling simulation and analysis for example wide area monitoring visualization and control dynamic capability rating real time load measurement and management interfaces and co simulation for modeling and simulation of hybrid systems It also presents key advanced features of modeling and automation of calculations using PowerFactory such as the use of domain specific DSL and

DIgSILENT Programming DPL languages and utilizes a variety of methodologies including theoretical explanations practical examples and guidelines Providing a concise compilation of significant outcomes by experienced users and developers of this program it is a valuable resource for postgraduate students and engineers working in power system operation and planning

PowerFactory Applications for Power System Analysis Francisco M. Gonzalez-Longatt, José Luis Rueda, 2014-12-27

This book presents a comprehensive set of guidelines and applications of DIgSILENT PowerFactory an advanced power system simulation software package for different types of power systems studies Written by specialists in the field it combines expertise and years of experience in the use of DIgSILENT PowerFactory with a deep understanding of power systems analysis These complementary approaches therefore provide a fresh perspective on how to model simulate and analyse power systems It presents methodological approaches for modelling of system components including both classical and non conventional devices used in generation transmission and distribution systems discussing relevant assumptions and implications on performance assessment This background is complemented with several guidelines for advanced use of DSL and DPL languages as well as for interfacing with other software packages which is of great value for creating and performing different types of steady state and dynamic performance simulation analysis All employed test case studies are provided as supporting material to the reader to ease recreation of all examples presented in the book as well as to facilitate their use in other cases related to planning and operation studies Providing an invaluable resource for the formal instruction of power system undergraduate postgraduate students this book is also a useful reference for engineers working in power system operation and planning
