Little, N. Paweletz, C. Petzelt, H. Ponstingl, D. Schroeter, H.-P. Administrative Editor: Zimmermann, V. Runnström-Reio, 2012-12-06 Two years ago about twenty people gathered informally in our institute to discuss mitosis We took this opportunity to try to separate the hard facts of mitosis which are accepted by most people from the soft ones which are still open for discussion Surprisingly few hard facts survived with their reputation still intact This result led us to organize a similar meeting on a larger scale The outcome was the workshop Mitosis Facts and Questions which was held at the German Cancer Research Center in Heidelberg from April 25 29 1977 An introductory lecture was given for each of nine major topics followed by an extensive discussion of facts questions and future experiments Further details were provided by posters The proceedings of the meeting are published in this volume We feel that many open questions and facts described here will provide stimulating ideas and a basis for further investigation of this fundamental process The success of the workshop would not have been possible without the help of many people We are very grateful to the German Cancer Research Center for its interest and assistance and for the support of the Verein zur Forderung der Krebsforschung in Deutschland represented by Prof Dr h c K H Bauer the ECBO European Cell Biology Organization and the Deutsche Gesellschaft fur Zellbiologie Our sincere thanks are also extended to our students and technicians for their enthusiastic help and to Mrs Joa for typing the manuscripts *Mitosis* Franz Schrader, 1944 *The Mitotic Cycle* Arthur Frederick William Hughes, 1952 Mitosis/Cytokinesis Arthur Zimmermann, 2012-12-02 Mitosis Cytokinesis provides a comprehensive discussion of the various aspects of mitosis and cytokinesis as studied from different points of view by various authors The

book summarizes work at different levels of organization including phenomenological molecular genetic and structural levels The book is divided into three sections that cover the premeiotic and premitotic events mitotic mechanisms and approaches to the study of mitosis and mechanisms of cytokinesis The authors used a uniform style in presenting the concepts by including an overview of the field a main theme and a conclusion so that a broad range of biologists could understand the concepts This volume also explores the potential developments in the study of mitosis and cytokinesis providing a background and perspective into research on mitosis and cytokinesis that will be invaluable to scientists and advanced students in cell biology The book is an excellent reference for students lecturers and research professionals in cell biology molecular biology developmental biology genetics biochemistry and physiology
