

MITOSIS LAB

Name: _____

One of the basic tenets of biology is that all new cells come from living cells. These cells are formed by the process of cell division which includes both the division of the cell's nucleus (**karyokinesis**) and the division of the cell's cytoplasm (**cytokinesis**). Mitotic nuclear division typically results in two **daughter** (divided) cells. All of the following processes are accomplished through mitotic cell division:

- Formation of an adult organism from a fertilized egg (oviparous)
- Asexual reproduction (as in the reproduction of bacteria)
- Regeneration (as in the regrowth of a starfish arm)
- Repair or maintenance of body parts (as in the healing of a wound or the replacement of epithelial tissue)
- Growth (as in growth in height of a tree or growth in size of a maturing animal)

Although, once it has started, mitosis is a continuous process, scientists have divided it into distinct stages for convenience and ease of study and understanding of the cellular events.

Directions:

1. In this lab, you will be using a compound microscope and a prepared slide of onion root tips to identify the stages of mitosis.
2. Once you have focused the image, you may begin to identify the stage of each cell in your field of view. Try to identify at least one cell in every stage of mitosis. Allow all group members to identify the stages.
