Part 1. Animal Diets

Background

Owls are raptors. Raptors are strictly meat eaters. They eat the whole animal (fur, bones, and flesh) to receive the nutrients they need. All raptors except owls can digest almost anything except the fur. Owls cannot digest the fur, teeth, and bones. Unlike other birds, owls have no crop. A crop is a loose sac in the throat that serves as storage for food for later consumption. The owl's stomach has two parts. The first part begins the process of digestion. The second part is the muscular stomach, or gizzard. There are no digestive glands in the gizzard. It holds back insoluble items such as bones, fur, teeth, and feathers. Several hours after eating, these items are compressed into a pellet that is the shape of the gizzard. It travels up to the first part of the stomach, and it may remain there up to 20 hours before being regurgitated. No other prey can be swallowed until the pellet is expelled. Regurgitation often signifies that an owl is ready to eat again.

By studying the bones found in owl pellets, scientists can find out about the diet of owls and the distribution of prey animals found in the area. Other ways scientists can study animal diets are by examining animal feces or "scat" or by dissecting the stomachs of dead animals to identify the contents of their last meal.

LABORATORY OBJECTIVES:

1. Separate the fur, bones, and teeth found in an owl pellet.
2. Clean and categorize the bones. Attempt to determine the number of mice and rats by pairing right and left lower jaw bones with the skull. Share information with the class to formulate ideas about the diets represented by these pellets.

Laboratory Exercises in Invertebrate Zoology Alan Holyoak, 2016-10-12 The cost of textbooks and laboratory support materials has skyrocketed over the past few decades A new copy of a laboratory manual in invertebrate zoology published by a textbook company can now cost over 100 copy In my opinion this is just too expensive especially when such a lab manual may be woefully out of date That's why I developed a set of exercises several years ago to support my course in invertebrate zoology When I learned about the CreateSpace self publishing service I decided to make these exercises more broadly available 1st edition 2013 In the meantime I solicited feedback from users and worked to review and update materials in these exercises in light of recent developments in the field The 3rd Edition of Invertebrates by Brusca et al was released in winter 2016 and I decided to update all taxonomies and related material in the second edition of this set of laboratory exercises to conform with information in that textbook This new edition includes a significant changes and improvements in many areas including the following 1 82 pages of new material 2 71 new figures 169 figures total 3 46 links to supplemental video material on the anatomy or behavior of invertebrates 4 A glossary of terms at the end of each chapter 5 Updated and expanded taxonomic information for all groups following Invertebrates 3rd Ed by Brusca et al 2016 6 Tables listing defining characteristics for major taxa are included in each chapter 7 Inclusion of word roots word meanings for many taxonomic names 8 A taxonomic index replaces the cumbersome index of the 1st edition 9 Addition of a procedure for calibrating and using an ocular micrometer to the chapter on microscopy 10 Replacement of the old overly complicated exercise on cladistics with a new streamlined exercise 11

Addition of an entirely new chapter on Domain Eukarya including life cycles of pathogens This chapter includes an introduction to Group Amoebozoa Group Chromalveolata Group Rhizaria Group Excavata and Group Opisthokonta¹² Addition or expansion of exercises on corals and siphonophores to the chapter on Cnidarians¹³ Addition of Phylum Ctenophora to the lab manual¹⁴ Addition of a larger number of nematode representatives including *Tubatrix* and the pathogens *Trichinella* *Wuchereria* *Enterobius* *Dracunculus* and *Dirofilaria* including their life cycles to the chapter on Phylum Nematoda ¹⁵ Addition of tardigrades onychophorans and pycnogonids to the chapter on Panarthropoda¹⁷ New and expanded material on arachnids and myriapods in the chapter on Panarthropoda¹⁶ Addition of ophiuroids to the chapter on echinoderms And the price is still set with students in mind at only 20 copy for a hard copy version and even less for a Kindle version

Molecular Tools for Screening Biodiversity A. Karp, D.S. Ingram, Peter G. Isaac, 2012-12-06 Mark Chase There are many literature resources available to molecular biologists wishing to assess genetic variation but the myriad of techniques and approaches potentially available to the plant breeder and the evolutionary biologist is truly bewildering and most have never been evaluated side by side on the same sets of samples Additionally it is often not recognized that tools that are useful for breeders can often be adapted for use in evolutionary studies and vice versa but this is generally the case The borderline between population genetics and phylogenetics is vague and difficult to assess and a combination of both types of tools is best when it is not clear with which area one is dealing Furthermore it is not now appropriate to use just one type of marker in any kind of study most markers have the potential to misinform under certain conditions so it is always wise to incorporate at least two different types of assessments into any project This volume is designed to facilitate this sort of multiple approach and provides comparative data on most currently available methods so that researchers can more intelligently select those appropriate to their area of interest regardless of whether it is in the realm of breeding or evolutionary biology The American Biology Teacher , 1979 Includes section Books
